

Reading Labels

Today's labels are fictional paper examples.

Find ingredients, dates and storage; compare the same measure.

An adult checks any real product before classroom use.

Where might a packet tell us what is inside?

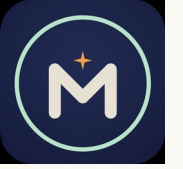

Three checks before using food

Read the ingredients and allergen information.

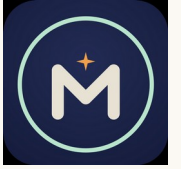

Read the date words and the date.

Read storage and after-opening instructions. Ask an adult if anything is unclear.

Three checks before using food — continued

Is a picture of a tomato enough information?

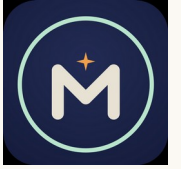

Spot the ingredient warning

Label A includes cream (MILK). The capitals highlight milk here.

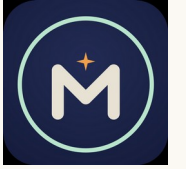

Some regulated allergens are emphasised within ingredient lists.

“May contain CELERY” on Label B also needs an adult check.

Spot the ingredient warning — continued

Can a pupil with a milk allergy choose Label A because it shows tomatoes?

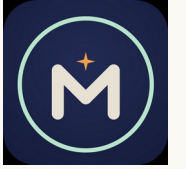

Two dates, different jobs

Use-by: a food-safety date. Do not eat food that has simply stayed chilled beyond it.

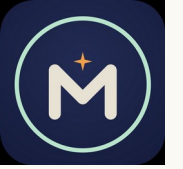

Best before: a quality date; ask an adult to check the product and its storage.

Smell cannot make an out-of-date use-by food safe.

Two dates, different jobs — continued

Soup says “Use by 8 October”. On 9 October it smells normal. It was never cooked or frozen. What now?

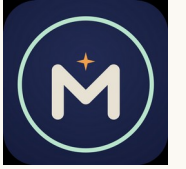

Find it on Label A

Ingredients include cream (MILK).

Use by 8 October 2026. Refrigerate at 5°C or below.

After opening: use within 24 hours and before the end of the use-by date.

Which instruction tells you what changes after opening?

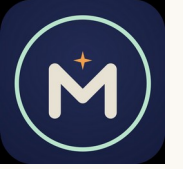

Date and storage detectives

Case 1: chilled soup is past its use-by date.

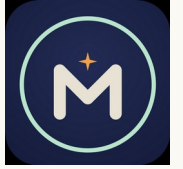

Case 2: dry crackers are past their best-before date.

Case 3: soup was left warm overnight before its use-by date.

Date and storage detectives — continued

Which case shows that being before the date does not settle the question?

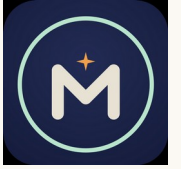

Compare the same measure

Soup A: salt 0.60g per 100g. Soup B: salt 0.30g per 100g.

Both packs contain 400g. A costs £1.20; B costs £1.00.

Read the units. This comparison does not settle allergy suitability.

Which label shows the smaller salt amount per 100g?

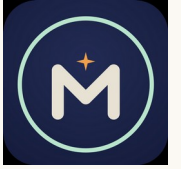

Read, compare, ask

Find one ingredient warning and the storage instruction.

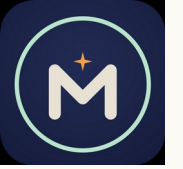

Compare salt using per 100g on both labels.

Tell the adult about “may contain”, unclear information or a storage problem.

Read, compare, ask — continued

Does Label B's smaller salt number prove it is suitable for someone with a celery allergy?

One label decision

A pot says “Use by yesterday”. It has only been kept chilled.

It looks and smells normal.

Choose an action, explain it and return the paper labels.

Eat it, or stop and tell an adult?
