

A digital identity project with safe choices

Today: make a document or five-slide presentation for fictional River.

Bring together useful digital skills without publishing or revealing anyone's personal details.

What will make this more than a decorated profile?

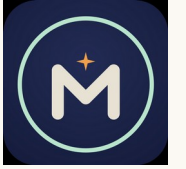

Words that help

DIGITAL IDENTITY

Information and presentation connected with a person online.

EVIDENCE

Something that demonstrates an action or supports a claim.

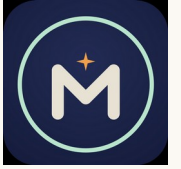

The skills we can now combine

Open and use a suitable tool; format with purpose; name, save and retrieve files.

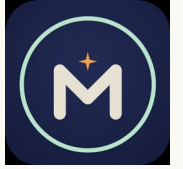

Insert a visual without distortion; check data and explain a comparison.

Reduce unnecessary exposure and get help with a concerning online request.

The skills we can now combine — continued

Which skills can the final file show, and which need a demonstration?

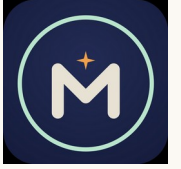

Choose one format and five sections

Choose GROW_W7_Digital_Identity_Starter.docx or the same-named .pptx starter.

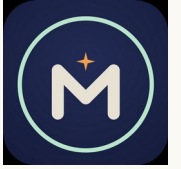

Complete: safe introduction; interests; digital skills; what the data says; safer choices.

Use a document or five-slide deck. Both formats are assessed on the same six criteria.

Choose one format and five sections

Does choosing a presentation mean you must speak to the class?

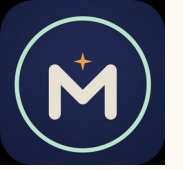

What we know about River

River is a fictional display name for this classroom project. River enjoys drawing and model making.

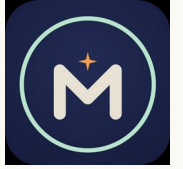

No real surname, school, age, location, account or photograph is needed.

The data is the fictional club vote: Drawing 7, Model making 9, Coding 3, Gardening 5.

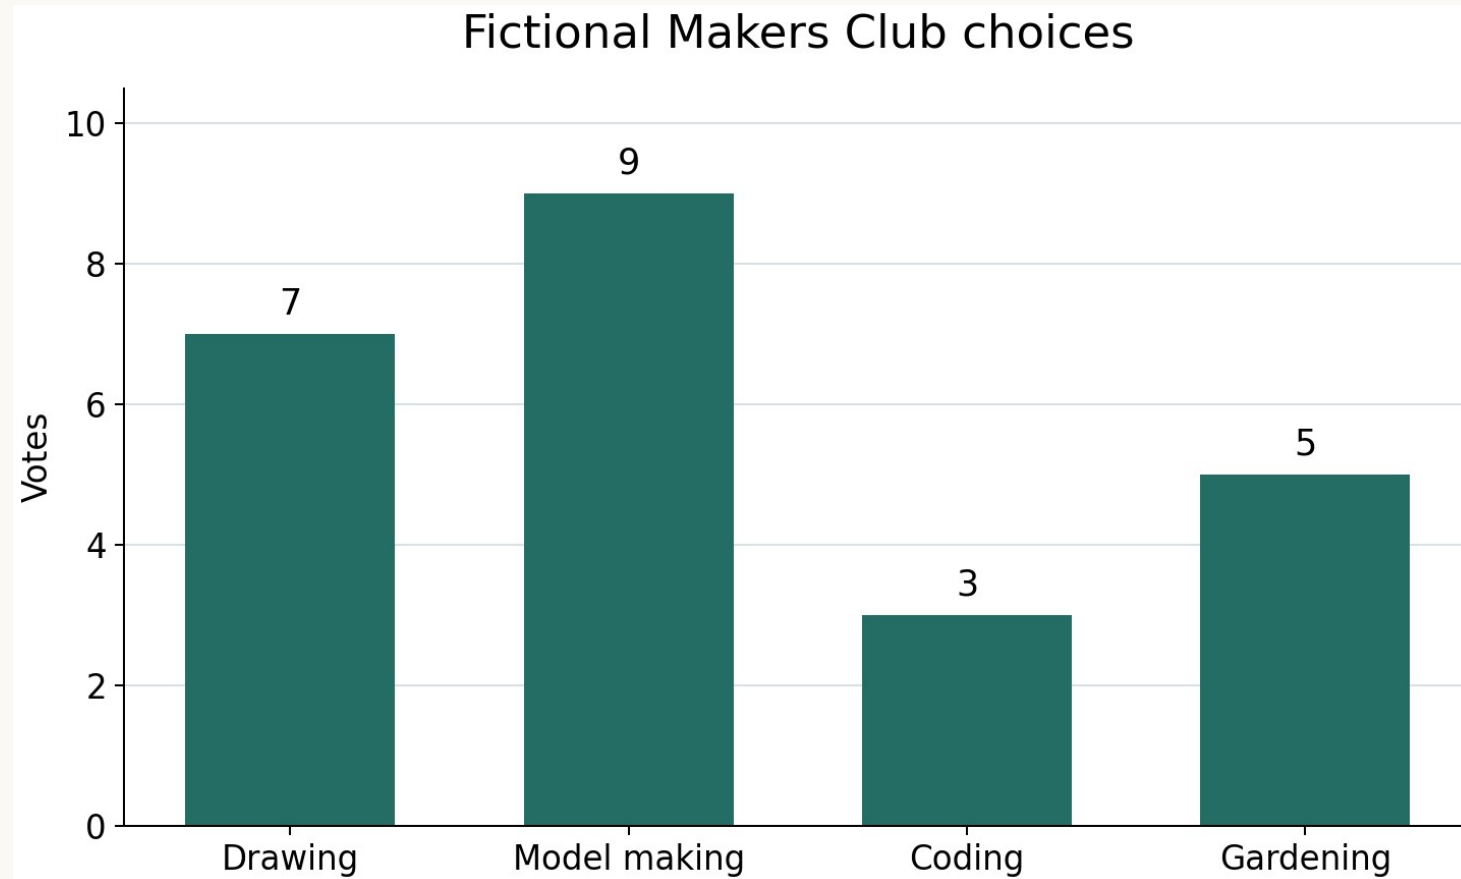

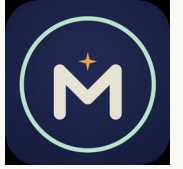

What we know about River — continued

Which information is enough for a general introduction?

Read the fictional votes

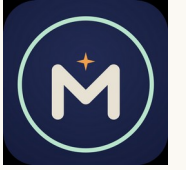

We do: chart plus a useful sentence

Insert your checked Week 5 chart or assets/GROW_Club_Votes_Chart.png.

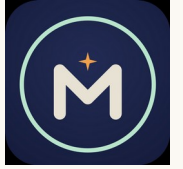

Keep its proportions and readable labels; add “Fictional Makers Club votes” as a caption.

Write: “Model making received 9 votes, 2 more than Drawing.”

We do: chart plus a useful sentence — continued

What evidence supports the comparison?

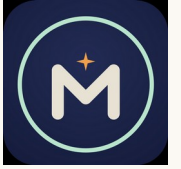

Write safer choices that can be used

For the prize/password message: pause, do not reply or follow its link, and ask an available adult.

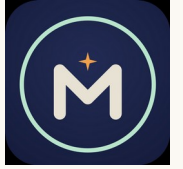

For privacy: settings reduce exposure, but someone with access may still copy content.

Explain one of these limits accurately; no real account setting needs changing.

Write safer choices that can be used — continued

Improve: “My profile is private, so it is completely safe.”

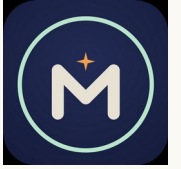

You do: complete and check the project

Replace all starter prompts and complete the five sections.

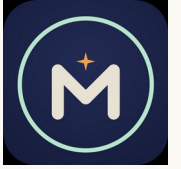

Demonstrate one useful formatting change and insert the chart image.

Add two actual digital actions used, an accurate comparison and practical safer choices.

You do: complete and check the project

What would count as two digital actions?

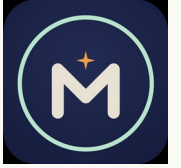

Review the same six things

Content, purposeful formatting, chart placement, data reasoning, safer choices, and file/review habits.

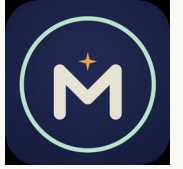

Show the evidence in the project. Your teacher will record support separately.

A supplied chart is allowed; say where it came from.

Review the same six things — continued

Why is “I did everything independently” not a useful claim without evidence?

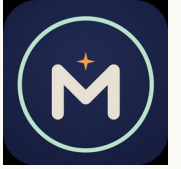

Save, reopen and improve one part

Save as GROW_W7_River_Digital_Identity_v1.docx or .pptx in the approved task folder.

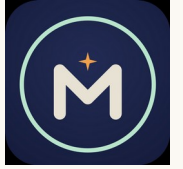

Reopen the copy and check the five sections, chart and safer advice.

Make one useful edit, save again and explain its purpose.

Save, reopen and improve one part — continued

What would be a meaningful final edit?

Show one skill and choose a next step

Choose one part to show privately or explain in writing, by pointing or with a scribe.

Complete: “I can show _____. Next I will practise _____. Support that would help is _____.”

What matters about the next step?
