

Strengths with evidence

Today: notice strengths, use evidence and plan one small step.

Use the fictional characters or a private example of your own.

What could someone be good at that is hard to see?

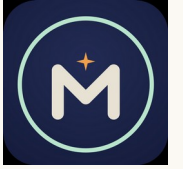

Words that help

STRENGTH

A skill or quality someone can use and develop.

EVIDENCE

An example that supports an idea.

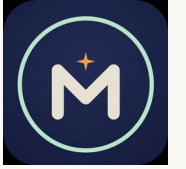

Choose how you take part

Speak, point, draw, type, ask for a scribe or pass on sharing.

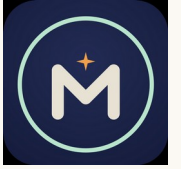

We discuss actions and ideas. Nobody has to describe themselves or another pupil.

A private help request is always welcome.

Choose how you take part — continued

Which response route would work for this task?

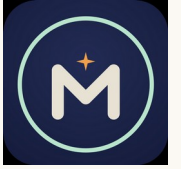

Meet Jay: what is the evidence?

Jay's model bridge falls. Jay asks for a diagram, changes the base and tries again.

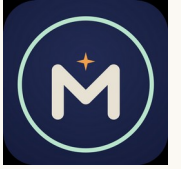

Sam says, "Jay is the best at everything."

Ali says, "Jay tried a new idea after the first attempt."

Meet Jay: what is the evidence? — continued

Which comment gives evidence of a strength?

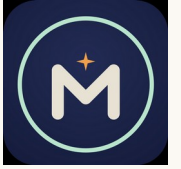

A strength needs an example

“Creative” is a strength word. “Made two different designs” gives evidence.

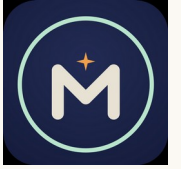

Strengths can include practical skills, listening, asking for help and noticing details.

Support and rest can help skills grow. People learn at different rates.

A strength needs an example — continued

Complete: “Jay showed ____ when ____.”

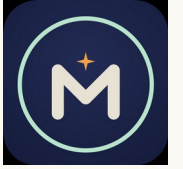

Spot the strength

Mina notices that the recipe is missing a step and checks with an adult.

Eli listens to two ideas and sketches a third design using parts of both.

Rob returns a borrowed tool and says where it has been put.

Match each action to a strength. Give a reason.

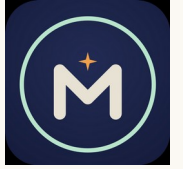

Feedback or put-down?

A: “Your labels are hard to read. Could you space them out?”

B: “You are useless at this.”

C: “I can show you an example if you want.”

Which comments could help? What could the person do about B?

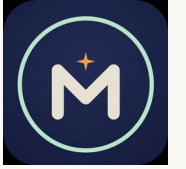

Model a small next step

Goal: make the bridge plan easier to follow.

Step: add three large labels using the example diagram.

Support: ask an adult to check one label, then review the other two.

Why is this more useful than “be better at everything”?

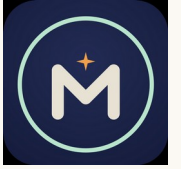

Your learning record

Task 1: link characters' actions to strengths.

Task 2: improve a feedback comment and identify a safe response.

Task 3: plan one next step for a fictional character or yourself.

Choose a response route and complete the three tasks.

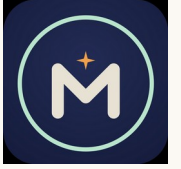

A view should reach someone

You can suggest a change to next lesson: larger cards, more thinking time or another response route.

Tell the teacher in the way you choose. The teacher will consider the suggestion and explain the decision.

Which change could make the task more accessible?

Can a supported success count?

A character completes a model with a diagram and adult help.

They say, “It does not count because I had support.”

What would you say, using evidence?
