

Pinpoint the Place

I can use an atlas index and grid references to locate and describe a place, then state one representation limit.

[Open the original interactive lesson](#)

Named adult reports what happened to the Week 8 resource/curriculum recommendation before new choice begins.

Standard

Explain one thing a map showed in Week 8 and one thing it could not explain.

How can a grid reference make a location precise without pretending a map shows everything?

Enquiry

INDEX FINDS THE SQUARE

The atlas index gives a page and a reference: 33 44 .

EASTINGS FIRST — ALONG THE CORRIDOR

Read the blue numbers along the bottom first: 33 .

NORTHINGS SECOND — UP THE STAIRS

Then the red numbers up the side: 44 . Along, then up.

PRECISE IS NOT COMPLETE

How can a grid reference make a location precise without pretending a map shows everything?

A four-figure reference finds a 1 km square. It does not show what the place is like.

How can a grid reference make a location precise without pretending a map shows everything?

Grid map with the target square highlighted

Arrow along the bottom to easting 33

Arrow up the side to northing 44

How can a grid reference make a location precise without pretending a map shows everything?

Grid map dimmed with a note on its limits

Model defensible map-and-source reasoning

Watch the decision, evidence and limitation—not just the finished sentence.

1. Use the atlas index to find a page or grid square; use the key to identify the symbol.
2. Read the numbered vertical line on the left of the square first: the easting.
3. Read the numbered horizontal line below the square second: the northing.

Grid trainer · find it, then reference it

Constructed model: not an OS map. It rehearses easting-first, northing-second.

Model defensible map-and-source reasoning

1 · Choose a symbol. 2 · Choose its easting (blue). 3 · Choose its northing (red).

Easting (along):

Model defensible map-and-source reasoning

A. 31

B. 32

C. 33

D. 34

E. 35

F. 36

Nothing (up):

B. 42

C. 43

D. 44

E. 45

F. 46

Choose a symbol on the map.

A. What can this reference NOT show?

Model defensible map-and-source reasoning

Tappable six by six grid map with symbols

Commit before reveal

A bridge lies in the square east of line 31 and north of line 44. Which four-figure reference identifies the square?

A. 3144

B. 4431

C. 3245

Add precision without overclaiming

Compare, qualify, protect variation.

1. A four-figure reference identifies a 1 km square on an OS grid; greater precision needs more digits.
2. Relative location adds meaning: north-east of, beside, across the river from, about two squares away.
3. A grid can locate a symbol but cannot by itself explain experience, importance, movement or belonging.

Rehearse the disciplinary move

River Tees grid lab

Constructed model: this is not an OS or navigation map. It rehearses easting-first, northing-second.

▣ Market

Library

A. Locate bridge

B. Locate market

C. Locate library

Choose a symbol. Read along first, then up.

Independent Humanities mission

Use the printed River Tees rehearsal grid and one teacher-approved atlas/map. Record locations with grid evidence, write a relative-location sentence, then identify one limitation of the representation.

EVIDENCE READY

Materials Printed route, named source cards and approved atlas/map as specified.

Access / care Enlarge, chunk, colour-adjust, read exactly or use agreed response mode.
No personal disclosure required.

Independent Humanities mission

Evidence target Decision → map/source action or product → learner explanation; highest prompt recorded.

Supported

Find two symbols; record two four-figure references; complete '____ is ____ of ____'. The map cannot show ____.'

Along first: _____. Up second: _____. Grid reference: _____. It is ____ of _____. The map cannot show _____.

Standard

Independent Humanities mission

Use index/key plus three four-figure references; describe a route or relative location; explain one map limitation.

Index/key → easting → northing → direction/distance → representation limit.

Stretch

Use the symbol's position within its square to explain what a six-figure reference would add; do not invent one from this schematic. Then judge whether extra precision changes the conclusion.

Four figures locate a square. Six figures would narrow the point by _____. More precise location does / does not strengthen the wider claim because _____.

Close one loop—do not create a second task

Standard

Give one location statement plus one map limitation.

Named audience receipt

“I heard your claim/decision as _____. Your evidence was _____. Your uncertainty/limit was _____.”

Influence: Pupils choose one approved map-support improvement for Week 10: larger coordinates, colour-safe symbols or a direction compass. Teacher owns feasibility and reports back at W10.
