

Stem Cells: Structured DISCUSS

LAUNCH • Science • 40 minutes

I can write or dictate a structured DISCUSS judgement and improve it after feedback.

Prepare before pupils arrive

Setup: Prepare one neutral prompt, the simulated evidence summary and two pens so the edit remains visible.

Safety: Receive scientific reasoning without ranking beliefs. Intervene if language devalues disabled people or presents cure as the only worthwhile outcome.

Equipment: Simulated evidence summary, DISCUSS planner, vocabulary strip, feedback/edit pen and pencil.

Safety: Pupils may use a written, spoken or exact-scribed response and may pass on sharing personal beliefs. No real treatment recommendation is made.

Fallback: Arrange sentence cards, dictate links and direct an adult to scribe. The judgement remains the pupil's.

Access and participation

Offer reading aloud, pointing, signing, quiet thinking, a no-touch route and exact scribing where these support the learner. Keep the same subject decision. In shared work, let each learner commit before feedback; use a partner as card mover or checker, then swap. Avoid public speed rankings.

Source lesson curriculum link: Discuss potential benefits and risks associated with the use of stem cells in medicine.

40-minute teaching sequence

Stage / total time	Teaching move	Adult support / response
Arrival • 3 min	Recall one benefit finding from W11L2. Recall one risk or uncertainty.	Wait, regulate and retrieve through the lightest workable route. If recall is inaccessible, point to one retrieval sentence; do not teach today's answer.
Starter • 3 min	Think first. Point, say, sign or write your choice.	Protect curiosity: receive every first idea without judgement. Ask 'What makes you think that?' and preserve the prediction for later evidence.

Stage / total time	Teaching move	Adult support / response
I do · 4 min	discuss — consider more than one side justify — give the evidence-based reason proportionate — matched to benefit and harm Read the command first: DISCUSS needs relevant considerations on more than one side. Build the answer: possible benefit with evidence; possible risk; ethical concern or uncertainty.	Let the teacher/model carry the explanation; pupils watch, point or track. Use a visual cue only if access is the barrier, then fade it.
We do · 4 min	Commit to an answer. Show the evidence you used.	Scan every response mode. Do not infer understanding from handwriting or confidence. Secure: transfer. Mixed: contrast. Misconception: counterexample then a fresh question.
I do 2 · 3 min	Audit the first draft: underline the evidence, box the risk or concern and circle the judgement. Receive one precise feedback point: missing side, unsupported claim, unclear command-word shape or overconfidence.	Model one complete evidence-to-explanation sentence, then pause. Keep the science words; change density, modality or adult role before changing the goal.
We do 2 · 4 min	Place each sentence in the role it performs, then repair the incomplete response. COMMAND EVIDENCE CONSIDER JUDGE EDIT Use the numbered cards in your pupil pack.	Protect pupil operation and thinking; support handling only where needed. Ask what changed and what stayed the same before supplying a scientific word.
Independent · 15 min	DISCUSS: Based only on the simulated evidence, should this fictional stem-cell treatment proceed to a larger, longer controlled study? Write or dictate a judgement, receive one feedback point, then edit the same response.	Protect independence. Accept equivalent evidence routes and scribe exact meaning. Prompt only as much as needed; fade as soon as the pupil continues.
Exit · 4 min	What did you edit, and why is the new line more scientific? Point to, read or explain the evidence you made.	Genuinely receive one final response and name back the Science heard or seen. Give one next move; the pupil edits or re-attempts on the existing work.

The timing belongs to the whole stage. Several PowerPoint slides may share it; do not restart that time on every slide. Full source-stage text is in the PowerPoint speaker notes and original HTML.

Answers, evidence and feedback

Hinge answer: The evidence suggests possible benefit, but the short follow-up and adverse events mean a confident safety claim cannot yet be made.

Yes. It weighs relevant evidence and explains why the limitation changes the conclusion.

Misconception repair

Repaired. DISCUSS considers relevant perspectives but the judgement must reflect the quality and limits of evidence.

Guided checkpoint

Yes. It weighs relevant evidence and explains why the limitation changes the conclusion. Look for a conclusion that is connected to the available evidence and its limitation.

Possible benefit

BENEFIT + EVIDENCE. Benefit evidence placed; it still needs the simulated-data caveat. This sentence reports a potentially helpful outcome.

Possible harm

RISK / CONCERN. Risk evidence placed; a discussion must not hide it. This sentence reports a potentially harmful outcome.

Cautious conclusion

JUSTIFIED JUDGEMENT. Judgement placed; it follows from the limitations. This sentence weighs evidence and states what should follow.

Model limitation

A frame cannot decide which evidence is strongest, and a balanced answer does not require pretending all claims have equal evidence.

Independent evidence

A balanced first response, one genuine audience comment, a visible edit and the pupil's statement of what changed.

Supported: Choose one benefit, one risk/concern and one cautious conclusion; order them and add because. Use the three-part frame and icon cards. Adult exact-scribing is valid.

Standard: Write or dictate a structured DISCUSS paragraph, then make one evidence-led edit. Use: One possible benefit... However... On this evidence...

Stretch: Weigh evidence, ethical concern and uncertainty, then edit an overclaim into a proportionate judgement. Depth comes from weighting and precision, not Higher-tier content or extra length.

Record the teaching response

What the learner actually showed	Next teaching action
Secure explanation with evidence	Reduce content prompting; offer another example or a limitation.
Partly correct / mixed	Point to the deciding evidence and invite a revision.
Access barrier	Change the reading, sensory or response format; keep the subject decision.
Missing source or observation	Keep the gap visible. Name the source or authorised check needed.

Safety and evidence boundary

Use the centre's authorised practical or fieldwork method and local risk assessment. Supplied sample data, fictional place models, card feedback and rehearsals are teaching material. They are not the learner's practical observations or proof of a qualification outcome. For portfolio use, check the exact registered unit/version, accepted evidence and centre process.

Sources and companion notes

Primary classroom source: [SCI_L_W11L3_Stem_Cell_Discuss_Do.html](#)

The uploaded lesson is included unchanged. Text and teaching steps in the PowerPoint are editable; source diagrams are placed images. Word booklets are editable. Static PDFs cannot reproduce HTML controls; use the paper cards/tables or open the original HTML.

Verification scope: matched to the uploaded title, pathway, objective, stage sequence and 40-minute timing. Embedded workbook references are retained as source locators; this is not a new line-by-line audit of every scheme-of-work row or a centre assessment sign-off.
