Seeds and indoor sowing

Horticulture: soil, seeds & planting.

Gardening and enterprise
Resilience & Change

Our planting workspace

Use untreated pea seeds and the approved growing medium.

Use a draining tray with a catch tray. Ask for a safe job.

Keep materials away from your mouth and water away from power.

Cover cuts. Use agreed gloves. Wash hands afterwards.

Our sowing sequence

Step	What we do
1	Fill the tray with damp growing medium.
2	Space pea seeds about 2.5 cm apart.
3	Cover the seeds to about 2.5 cm deep.
4	Gently water if needed. Keep it damp.

Watch the adult model. Follow one step at a time.

Our label and growing place

Label the tray: pea seedlings and a tray code.

An adult places it in a safe bright position away from a heater.

Record the tray code so we can follow the same seedlings.

No eating or tasting is part of this work.

Our water check

The growing medium is already wet.

A Add more water automatically.

B Check first and follow the agreed care instruction.

Which choice would help us care for the seedlings?

Our care rota

Role	Our care job
Moisture checker	Check with an adult before watering.
Watering helper	Add a little water only when needed.
Recorder	Note what we can see and care given.
Adult backup	Care during absence and check root space.

Agree roles without using names on the pupil record.

Our growth record and evidence

Weeks 1 to 5: record what we can see, care given and the next check.

No visible change is a valid observation.

I helped with planting by ____.

Optional: We will check ____. Tell an adult or use your book.

Clear up and exit

Return tools, clear the work area and wash hands with soap and water.

What did you help with? What will we check next?

An adult backs up the care rota.

You may point, speak, pass or ask for a quiet pause.
