A growing calendar

Seasonal growing & plant care.

Gardening and enterprise
Resilience & Change

Our real tray check

Keep the original tray code and check the same tray.

Count shoots and measure the marked shoot if it is visible.

Check moisture and agree any care with an adult.

No visible growth or no water needed can be a true record.

Our seasonal crop guide

Crop	One simple route
Radish	Sow directly in spring or late summer.
Lettuce	Sow spring to midsummer. Plant out when ready.
Broad beans	Start indoors from February or sow in spring.
All three	Use the monthly guide and check conditions.

Harvest depends on the crop, sowing and conditions.

Our actual growing space

Check our growing space with an adult.

Find usable size, light, drainage and safe access.

Choose two crops the space and care cover can support.

If details are missing, mark the choice provisional.

Our crop choice check

Our only growing space is a small container.

A Choose without checking depth, light or care.

B Check the space and crop needs first.

Which choice helps us make a workable plan?

Our planning checks

Check	Our choice needs
Usable space	Enough room, depth, drainage and safe access.
Light	A suitable bright position for the crop.
Timing	A month from the guide and suitable conditions.
Care cover	An adult agrees care during absence.

Choose two crops. Give a reason linked to the real space.

Our growth record and evidence

Keep the original tray code and earlier growth entries.

Add real Week 2 observations and care. No growth is valid.

I chose ____ and ____ because ____.

Use your book, point or tell an adult what to scribe.

Clear up and exit

Return tools, clear the work area and wash hands.

Which two crops fit our checked space, and when?

An adult backs up the care rota.

Keep provisional choices clear. Adult care cover continues.
