A safe gardening task

Using gardening tools safely.

Gardening and enterprise
Resilience & Change

Our task and conditions

An adult checks tools, space and the chosen job.

Outdoor work needs a weather and ground check.

Indoors, use a ready plant or an empty-pot rehearsal.

Actual care and blunt-tool cleaning are useful jobs.

Tools for our short task

Tool	Safe task
Hand trowel	Add a small amount of prepared medium.
Hand fork	Use an empty area away from live roots.
Watering can	Water gently only after a moisture check.
Brush and cloth	Clean blunt tools, then dry and store.

Our working space

Keep a clear gap and the free hand away from the tool.

Park tools before moving or asking for a pause.

Stop and ask if the tool, plant or space is unsuitable.

Secateurs stay under adult control.

Our safe-use decision

The fork is about to enter the planted pea tray.

A Continue even though roots are in the way.

B Stop and use an agreed empty practice area.

Which choice protects the plants and the work area?

My safe-working self-check

Check	Ready to continue?
Before	Correct checked tool and clear space.
During	Safe gap and free hand clear.
After	Blunt tools clean, dry and stored.
Hygiene	Hands washed with soap and water.

Yes / help / not yet. Park the tool and ask if unsure.

Our Week 3 record

Keep the original tray code and earlier growth entries.

Add real observations and care. No change can be true.

I used ____ safely by ____.

Use your book, point or tell an adult what to scribe.

Clear up and exit

Return tools and let the adult check storage.

Wash hands with soap and water, even after gloves.

Name one safe action and one next check.

Adult daily care cover continues between lessons.
