Our maintenance routine

Maintaining a growing area.

Gardening and enterprise
Resilience & Change

Our real area check

Look at the actual tray or adult-approved growing area.

Check moisture, unwanted plants, pests and damage.

Notice clear routes, edges and readable crop labels.

Look first. Ask the adult before removing anything.

Week to week care

Check	Possible maintenance
Unwanted plants	Remove only plants the adult has identified.
Moisture	Water gently only when the check shows a need.
Pests or damage	Look, record and tell the adult.
Paths and edges	Tidy safe items and keep routes clear.

No action needed can be a correct record.

Our safe working check

The adult checks the area, tools and conditions.

Keep roots safe and stop when something is unknown.

Park tools, clear spills and wash hands after work.

Pupils use no pesticides or chemical cleaners.

Our maintenance decision

A small plant is growing beside the crop.

A Pull it out before checking what it is.

B Ask the adult to identify it and agree any action.

Which choice protects the crop and the worker?

Our group rota

Job and check	Role and timing to agree
Moisture check	Checker code ____ When ____
Plants or damage	Observer code ____ When ____
Paths and labels	Job code ____ When ____
Adult backup	Adult role ____ Care cover ____

Agree jobs, checks and backup. Read the rota back.

My one-line evidence

I helped agree a routine for ____ by ____.

Tell an adult or use your book.

Name the contribution you actually made.

Review and exit

Park tools, clear the route and wash hands.

Read back our agreed rota and next check.

An adult covers care when pupils are absent.

Next session: carry out an agreed maintenance job.
