Maintenance knowledge card

White standard edition

Maintaining a growing area.

A check before a job

Use the group-agreed rota to choose one useful job. Check moisture before watering. Remove only an unwanted plant the adult has identified, without disturbing crop roots. Look for pests, damaged leaves or broken equipment and tell the adult. No action needed can be a valid result.

A tidy growing space

Keep paths and edges clear of safe loose items. Leave unknown plants, fungi, sharp objects, animal waste or suspected contamination for the adult. Indoors, care for trays, prepare clear crop and tray-code labels, or brush and rinse checked empty pots with clean water. Drain and dry them. This removes soil; the adult decides any further cleaning before reuse.

An honest record

The adult takes area-only photographs before and after maintenance from the same view. Keep people, names, signs, logos and identifying labels out of view. Photos show visible change or no change; they do not prove plant growth or every pupil skill. Keep the original tray code and add only actual Week 4 growth and care observations.

Use an approved adult-controlled camera and usual secure records. Turn location tagging off and check image information. Do not publish or upload. If no photograph is taken, use an honestly labelled written description instead.
