Staff answers and checks

Starter: keep water amount and waiting time the same in a fair rock check. A finished brick is made. Animals get nutrition from food. Check actual taught coverage before retrieval.

Model: bones help support a body. The safe rock sample, not a food picture, can support a fact about that rock. A rough surface is an observation only if actually observed; the drawing is a simplified model, not a new result.

Sort in source order: Body, Food, Rock. Supported points to a model; Independent matches a fact to a model or action; Aspire names a fact that needs a new check. Keep the learner’s reason separate from shared sorting.

Step check: A, a real safe sample you felt. An adult-led observation is equally valid if touch is not chosen. Hinge: D, a safe water test of that lid. A uses a different lid; B guesses from colour; C uses an unrelated rock card. Hold all three or four first choices before hearing individual reasons.

Staff answers · task, limits and next move

Parallel check: a claim says a rock feels rough. A safe check of that rock fits; a picture of a different rock does not settle its feel. Re-model for an unsure learner. Secure learners choose a new matching clue while the adult checks the others.

Independent: Supported shows one fact about body or rock; Independent shows two facts and how one was found; Aspire picks the best real evidence and explains why it fits. Retain the deeper question: which claim cannot yet be shown and what could check it? Do not invent missing prior work.

Safe prepared kit is optional rehearsal. Use checked blunt models or samples on trays; no tasting, scraping or forced touch. A photo or adult handling directed by the learner is valid. The floating-lid hinge asks which test would help; no water practical is required.

Review: give actual VF and a specific NS(+). Keep the first response and the learner’s own edit or reason to keep it. Exit names the fact, clue and next step. A technician keeps records so another person can check the work. One page and pack cover both BUILD periods.

Staff guidance · group, access and feedback

BUILD: three to four learners. Use two pairs for four, or one trio for three. In a pair, one explains and one asks for the clue; swap. In a trio, the third checks the source, then rotate all roles. Each learner first chooses privately and keeps their own record. Hear every learner at the hinge. Re-model a shared error, or support an unsure learner while secure learners try a fresh check. Never use a percentage rule.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-BUILD-A2-W07 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve Show work you did about body, food or rock. and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Spring 1 Week 1. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
