Teacher and cover plan

Tuesday 24 November 2026 | P6 | 40 minutes

Lesson

Spreadsheet formulas | Tuesday 24 November 2026 | Tuesday P6 | 40 minutes
LAUNCH pair. Year A. Formative; Week 7 is assessing.

Aim

I can use cell references in formulas and check that totals update.

Theme

Identity & Belonging: plan a fictional shared activity kit and keep each learner responsible for their own calculation.

Careers

Office and stock roles use spreadsheets to check quantities. Explaining a formula gives evidence of a digital skill for an application.

Prepare

Open the fourteen-slide lesson or HTML page. Open Spreadsheet_Practice.xlsx in a spreadsheet. It has Task with blank formula cells and Model with completed formulas. Save a fresh copy for each learner. Print a data card, chosen route and evidence record for each; offer pink paper. Use up to two devices, display and pens.

Participation

Model first, private answers, no cold calling and no required reading aloud. Offer pointing, typing, writing or quiet adult conversation. Staff may read privately on request. Avoid showing learner answers on the shared display.

Success

I used cell references in my formulas.
I checked the row results and whole total.
I changed an input and checked the new total.
I saved and reopened my own workbook.

Lesson sequence

Tuesday 24 November 2026 | P6 | 40 minutes

0 to 3 minutes Arrival

Slides 1-2. Compare a Model input with the data. Retrieve the source-check habit from Week 3.

3 to 7 Starter

Slide 3. Model B4, then private selection of C5 on Model.

7 to 10 Model one row

Slide 4. Demonstrate =B4*C4 and the formula bar. Show result 6.

10 to 13 Model the total

Slide 5. Complete the row formulas; total 16. Change B4 to 4; check 22. Restore B4 to 2.

13 to 15 Words

Slide 6. Teach =, *, range and SUM with the model.

15 to 20 Together

Slide 7. Check Task inputs; enter D4 and fade help for the next row.

20 to 23 Hinge

Slide 8. A typed 12 does not update. Re-model if needed; parallel check uses =3*4.

23 to 35 Task

Slides 9-13. Complete formulas, predict, change B4 to 5, check results and save. One device: six minutes each.

35 to 40 Exit

Slide 14. Transfer check, reopen and one next-step response.

Modelling and adaptations

Tuesday 24 November 2026 | P6 | 40 minutes

Model data

Model rows 4 to 6: paper packs 2 at 3 points; card packs 3 at 2; fastener packs 1 at 4. D4=6, D5=6, D6=4, D7=16. For live modelling clear D4:D7 in a disposable Model copy. Do not change the pupil Task sheet.

Exact demonstration

D4: =B4*C4. D5: =B5*C5. D6: =B6*C6. D7: =SUM(D4:D6). Show the formula bar after Enter. Change Model B4 from 2 to 4: D4=12 and D7=22. Restore B4 to 2.

Cognition and language

Chunk to one cell at a time. Point to column then row. Use the word page and formula frame. Allow planning in any language. Fade from a complete model to pointing at the next row, then independent entry.

Communication and SEMH

Use a predictable routine and quiet thinking time. No surprise questions or learner comparison. Offer a short pause within stage time and return to one cell. Do not force partner explanation.

Sensory and physical

Offer pink paper, larger zoom and an uncluttered view. Accept pointing with exact adult typing; record it separately from reasoning. Do not rely on colour alone to identify inputs and formulas.

Misconceptions

Typing a result creates a formula: inspect for = and cell references. A fixed formula follows input changes: =3*4 does not refer to B4. Every total is correct: wrong references or missing inputs can still give a number.

Evidence and next steps

Tuesday 24 November 2026 | P6 | 40 minutes

Core evidence

Inspect D4:D7 formulas, three initial row results and total, a prediction and changed total after B4=5, and the reopened saved file. A result alone is not proof of a formula. Record actual support.

Task checks

Initial D4=12, D5=10, D6=8, D7=30. After Task B4=5: D4=20, D5=10, D6=8, D7=38. Keep B4=5 in the saved core task. Accept =D4+D5+D6 for D7. Do not include D7 in its own sum.

Saving and turn-taking

Use the agreed ICT_Practice/W04_Formulas folder. Save as Kit_A_v1 or Kit_B_v1 with the workbook extension. One device: each learner uses their own copy for six minutes while the other plans privately. Aspire keeps v1 and saves v2. Do not count a shared file as both pupils' work.

Feedback

Give one success and one NS. Record VF, WS or I accurately. The learner responds in their own colour or private mode. R is used only after that response and an adult audience have both happened.

Paper fallback

Trace the references and calculate on paper. This can show planning and reasoning. Mark digital formula entry, recalculation and saving not yet observed; complete those at a later device session.

Assessment and progression

Secure: appropriate cell references, correct totals and an explained change. Developing: typed answers, fixed numbers or untested changes. Revisit one step. Week 5 makes charts; Week 7 is assessing.
