Staff answers and checks

Tuesday 15 December 2026 | P6 | 40 minutes

Source and privacy

Source A is checked for this kit and gives the required inputs. Source B is an unchecked older draft with a conflicting card rate. Date alone is insufficient. Use fictional kit facts and task labels, with no personal details.

Formulas and values

Task!D4 = B4*C4 gives 12. D5 = B5*C5 gives 10. D6 = B6*C6 gives 6. D7 = SUM(D4:D6) gives 28. Equivalent cell-reference formulas are valid. Inspect formulas rather than values alone. Typing 12, 10, 6 and 28 does not show formula use.

Chart

Plot Paper packs 12, Card packs 10 and Fastener packs 6. Exclude the whole total 28. Use a clear title, item labels and total points, with a zero baseline. Paper uses 2 more points than card and 6 more than fasteners. Points do not show price or popularity.

Paragraph and document

Accept a title, heading and coherent short paragraph. Example meaning: source A fits this checked kit; a product formula multiplies pack count by points each; paper needs most points; one stated access choice helps the reader. The pupil may use the frame but supplies the reasoning.

Slide

One current slide is enough. Accept a clear kit title, new chart and correct comparison. Use readable dark text, useful chart description and title-chart-comparison reading order verified in the software. A visible caption alone does not prove the alternative-text field was set.

Aspire

Paper packs changed from 3 to 4 gives paper 16, card 10, fasteners 6, whole total 32. Chart and narrative must match v2. Preserve v1. A static chart image and its description need updating separately.

Assessment evidence guide

Tuesday 15 December 2026 | P6 | 40 minutes

Files and sources

Record new copy, clear task label and reopen. Check personal details are absent. Record the source choice and a task-specific reason before feedback.

Document

Look for a useful title, heading, readable paragraph and correct facts. Record what the pupil changed today and what came from the earlier document.

Calculation and chart

Watch one formula entry or inspect it with the pupil explaining the references. Check the total formula includes each item once. Check chart categories, row values and a correct comparison. Record copying or supplied formulas.

Slide and explanation

Observe a readability choice, description setting and order check. Retain the paragraph explanation of the source, formula, comparison and access choice. A strong spoken reason alone does not prove software editing.

Evidence status

For each skill, record on own, access support, reasoning prompt or not yet seen, plus date, file or book location and exact help. Prior evidence has its original date. Missing evidence stays missing. No numerical pass threshold or external award is implied.

Review and feedback

Use one next step linked to a gap, such as checking a chart range or explaining a source. Retain the response and acknowledge it privately. A portfolio file count is not proof of the skills within it.

Hinges

Whole total is a sum of items, not another item for the comparison chart. An image file name does not describe the data. If either is unclear, re-model before the task and record the prompt.
