Tools, Equipment and Safe Use

What I am learning

I can name tools for a vocational task.

I can use a tool safely and correctly.

I can clean and store equipment properly.

Match the tool to the job. Ask before using new kit. Safe use includes cleaning and storage. A picture match does not prove safe tool use.

Tools, Equipment and Safe Use

The task steps

Name the job and choose a suitable tool.

Ask the adult to check the tool, task and space. Use only kit you have permission and training to use.

Follow the adult model for grip and use. Stop if the tool slips or looks damaged.

Follow the agreed cleaning method. Ask where the dry tool is stored. Check the station is ready for the next person.

Tools, Equipment and Safe Use

Words and worked example

tool: An item used to do a job.

equipment: The kit used for a task.

suitable: Right for this job.

grip: How you hold an item.

clean: Remove dirt by the agreed method.

store: Put kit back in its safe place.

A trowel suits a small planting hole. A whisk suits mixing. I would not use a whisk to dig. I ask the adult to check the tool and show safe use. On this page I match cards; any real tool use is off screen with the adult.
