Climate change causes and effects

Friday 12 March 2027 | P2 | 40 minutes | Year A

Humanities | GROW | Spring 2 Week 3 | HUM-GROW-S2-W03

Learning outcome: Investigate causes and effects of climate change.

You may point, write, type, speak in private or direct a scribe. You may pass. Reading aloud is your choice.

Climate is the usual weather over many years. Human actions add gases that trap more heat. Burning coal, oil and gas adds carbon dioxide to the air. This strengthens the greenhouse effect and warms Earth. This does not mean each year or each place gets warmer in a straight line. We can use climate evidence to check changes over time.

Today I can

I can tell a cause from an effect.

I can use a fact to build a climate chain.

I can read a graph and make a careful UK link.

In your book

In your book, sort C1 to C6 into causes and effects. Build one cause-to-effect chain with at least three steps. Read the graph to find the highest and lowest selected year. Finish one sentence about what this could mean for a general UK region.

____ adds gas to the air. More heat is trapped, so ____. For our UK region, this can mean ____.

Use one route page. You may plan in any language. The adult can read or scribe your exact choice.
