Cause Effect Cards

Friday 12 March 2027 | P2 | 40 minutes | Year A

Humanities | GROW | Spring 2 Week 3 | HUM-GROW-S2-W03

Read one card at a time. Use the code and a fact to explain your choice. Keep the code with its words.

C1 Burning fuels

Burning coal, oil and gas adds carbon dioxide to the air.

C2 Removing forests

Fewer trees can mean less carbon dioxide is taken from the air. Clearing forests can also release stored carbon.

C3 Farming and gas

Some farming adds methane to the air. Methane is a greenhouse gas.

C4 Warmer conditions

More trapped heat raises Earth's long-term mean temperature.

C5 Rising seas

Melting ice on land adds water to the sea. Warm sea water also expands. Sea level can rise.

C6 Heat and heavy rain

Warmer conditions can bring more hot spells. Warmer air can hold more water, which can make heavy rain more intense.

All card text is newly written. It is not a quotation or a claim about every person and place.
