Designing for a useful purpose

Design and Technology LAUNCH Spring 2 Week 1 Thursday 25 February 2027 P1 Year A

Weekly outcome verbatim: CONSTRUCTION: design a product to solve a problem.

I can plan a useful card stand, show three ideas and explain my choice.

Today I can

[ ] I can turn a small problem into clear design checks.

[ ] I can sketch three different ideas and add useful labels.

[ ] I can choose one idea and give reasons linked to the brief.

The problem

Invented client Sam needs one 80 mm by 60 mm card upright and readable. Allow a 160 mm by 120 mm table area for the whole stand including its channel. Plan for a 30-second level-table check with hands away, safe edges and removal by hand.

The design record

Brief. Three checkable points. Three different quick ideas. Two useful labels per idea. One chosen idea with two reasons. One real review change or question. Actual date, support and book page.

A useful label

Name a part and its job. For example, wide base may help the stand stay upright. This is an adult example. Keep your own ideas and reasons.

Resilience and change

A question or weak idea is useful information. Improve a feature or explanation and keep why it changed. No test is claimed before the product exists.

In your book. Plan in any language. Point, speak, sign or confirm exact scribed words.
