A stand to solve a small problem

Design and Technology LAUNCH Spring 2 Week 1 Thursday 25 February 2027 P1 Year A

Invented client Sam uses one paper prompt card at a desk. The card is 80 mm wide and 60 mm high. It falls flat, so Sam cannot read it while working. Design a small tabletop stand to keep the card upright and easy to read. It must hold the card for 30 seconds with hands away on a level table. Keep the message clear and let the card be removed by hand. The whole stand, including its channel, must fit a 160 mm wide by 120 mm deep table area. It must have safe edges and no loose sharp parts.

The useful job

Sam is invented. Keep one paper card upright and readable while Sam works. No real device, heavy load or food is needed. Do not bring personal possessions.

Our design checks

Hold the actual card for 30 seconds with hands away on a level table. Keep the message clear. Let the card be removed by hand. Plan safe edges and no loose sharp parts. Allow a 160 mm by 120 mm table area for the whole stand including its channel. The default triangular body base is 120 mm by 80 mm.

The first three lessons

Today: write checks, create three annotated ideas, choose one with reasons. Week 2: choose materials, plan sizes and make a card trial. Week 3: make, adjust and improve the approved design. These steps do not claim any later result.

Size before style

The prompt card is 80 mm wide and 60 mm high. Label the card size. The default triangular body has a 120 mm wide by 80 mm deep base. Its U-shaped channel projects beyond the front; allow a 160 mm by 120 mm table area for the whole stand. Label a sensible proposed stand size in mm; the adult reviews any changed design before Week 2. A sketch is not a cutting template. Written measurements and the actual approved plan govern later cutting.

Your own words

The problem is ___. The card needs ___. One design check I can explain is ___.
