Design and practical safety brief

Design and Technology LAUNCH Spring 2 Week 1 Thursday 25 February 2027 P1 Year A

Today is designing. No tool use is required. Read the agreed hand-tool boundaries before the later build.

1 This is a design lesson. Drawing, speaking, signing or pupil-directed scribing can meet today's task. No cutting, hot glue or powered equipment is needed.

2 Use hand tools only in this block, and only when the adult approves the actual task and supervision. Do not collect or try tools on your own.

3 Before any later cutting or joining, the adult checks the material, tool, work area, grip and safe route. An approved design is not tool permission.

4 For a concern or pause, stop, put any tool down in its agreed place and tell the adult. Restart only after the adult has made the task safe.

5 A drawing or empty-hand model is planning evidence. It does not prove that a stand has been made, tested or found safe.

The default future route

The taught model uses suitable thin plain card, approved scissors, finger folds and cold paper tape. Later the adult checks the actual card, tools, working position and support. Hot glue is comparison only in Week 2 and is not used. No power tools, craft knives, scoring blades, saws or drills are in the default method.

A concern or pause

Tools down. Compare with the plan. Ask the adult if unsure. Agree a safe change and recheck before resuming. Do not search among sharp offcuts with bare hands.

No materials

With no card, paper, ruler, printer or tools, hear the brief and picture three different stand shapes. Describe each one and two useful labels, by speech or signing. Choose one with a reason linked to Sam's problem. An adult records exact confirmed words when a recording method is available; mark transcription pending until it exists. Keep physical sketches, measuring, making and product tests pending where not done.
