Sequence and evidence guide

Design and Technology LAUNCH Spring 2 Week 2 Thursday 4 March 2027 P1 Year A

Design and Technology LAUNCH Spring 2 Week 2. Use the dated cover plan, actual pupil design and book first. School and Public contain the same generic resources.

Design make and improve

Week 1 defines an everyday problem, specification and three annotated ideas, then chooses one. Week 2 selects materials, lists parts and plans a card mock-up. Week 3 makes, adjusts and improves from the actual plan. Only Week 2 is included here.

One shared purpose

Invented client Sam needs one landscape paper prompt card to stay upright on a clear desk. The card is 80 mm wide and 60 mm high. The default body base is 120 mm by 80 mm. The whole stand, including the channel, should fit a clear table area 160 mm wide by 120 mm deep. Design a small tabletop stand that supports it for 30 seconds without a hand, is easy to move, and has no loose sharp parts. Do not use a phone, cable or personal item for the test.

Evidence this week

Retain the pupil-owned material choice and reason, measured list, safe sequence, actual mock-up status and real change or next check. Include date, location and support. Model information is not an actual sample test. A trial not made remains pending.

Resources and routes

Use Supported, Standard or Stretch. Type instead starts closed; Save my responses creates a local text file. No files, photos or private school records are uploaded. Plan in any language.

Models and safe build boundaries

Design and Technology LAUNCH Spring 2 Week 2 Thursday 4 March 2027 P1 Year A

Original model diagram

The flat parts and side views are original precise teaching diagrams, not full-size templates. Written ruler measurements govern. Body 120 by 260 with fold 80/160/240; channel 100 by 30 with long fold10/20. The 20 mm tab is inside at the top seam. U shelf out, front stop up.

Materials and tools

Properties are model information unless an actual sample trial is recorded. Thin card and paper tape are the default. Hand tools only. Hot glue is compared, never used. Dowel or soft wood needs a revised approved plan and separately approved manual tools, holding and trained supervision. No blade scoring or heated tool is required.

Keep the test honest

One 80 wide by60 high landscape paper card, hands away 30 seconds, clear level table; remove by hand. Whole model area target160 by 120 mm includes the projecting U channel; body base120 by 80 mm is different. Stop if it tips or slips. PVA routes need actual full cure before a joined test.

If materials are missing

With no card, tools, paper or printer, hear the model material descriptions and written sizes. Point, speak or sign a material choice and reason. Rehearse the steps with empty hands. An adult records exact confirmed words when a recording method is available. Mark transcription pending until it exists. A card mock-up and material tests stay pending; rehearsal is not practical evidence.
