Staff answers and checks

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

The purpose

Invented client Sam needs one paper prompt card, 80 mm wide by 60 mm high, upright and readable on a level table. Make a small card stand. It should hold that card for 30 seconds with hands away, fit within a 160 mm by 120 mm overall table area including the channel, let the card lift out by hand and have smooth safe edges. The default body base is 120 mm by 80 mm. These are design targets. Check the actual stand. No heavy object or extra load is used.

The default dimensions

Default: one suitable thin card body 120 mm wide by 260 mm long. Mark folds across the width at 80, 160 and 240 mm from the same short end. This gives three 80 mm faces and a 20 mm joining tab. Fold a triangle and tape the tab inside the first face at the top seam. Add a 100 mm by 30 mm retaining strip with long folds at 10 and 20 mm from the same long edge. Fold a shallow U channel. Tape its back flange at the bottom of the front sloping face. The shelf projects out and the front stop faces upward toward the card. Leave the stand ends open. Use the actual approved revised plan if it differs.

The hinge answer

Stop with tools down. 123 mm is outside 118 to 122 mm. Remeasure from ruler zero. Ask the adult whether a safe trim or a revised part is suitable before joining. Do not cut again without approval.

Parallel check

No. The default channel needs two long folds at 10 and 20 mm from the same long edge. Recheck and mark both. Fold the shallow U with a shelf and an upward front stop before joining.

These are staff model answers. Actual pupil checks and changes may differ. Never enter a model as a pupil observation.

Staff joining and change model

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

Joining and readiness

The default uses suitable thin card, approved scissors, finger folds and paper tape. No glue is needed. A different actual approved design needs its own checked sizes, method and support. Corrugated board may need prepared pieces. Dowel and soft wood are comparison choices from Week 2, not permission for wood cutting here. PVA is used only if the actual plan and adult label checks approve it, with full stated cure before testing. Never invent a cure time. Hot glue is comparison only and is not used. No power tools or heated tools are used.

Change model

Adult example only: The card slipped during the first agreed test. I saw that the front stop was folded flat. With adult approval I refolded the U so the shelf projected out and the front stop faced up. I then repeated the 30 second test and recorded its actual result. This is a model account, not a pupil result.

Default measurement checks

The cut targets use a 2 mm improvement range: body width 118 to 122 mm and length 258 to 262 mm; channel length 98 to 102 mm and width 28 to 32 mm. Check every fold from the same zero edge. These are improvement checks, not grades. A revised plan uses its approved recorded targets.

Practical evidence

Use actual values and the real stage reached. Pupil directed adult handling records the pupil decision and adult tool action separately. A demonstration sample is an adult model. A proposed change has no recheck result until the actual check happens.

Time and unfinished work

Do not rush to make a complete item in 40 minutes. Reuse and refine a real Week 2 mock up where suitable. Stop safely, retain unfinished work and record the next step.

Staff misconceptions and evidence

Design and Technology LAUNCH Spring 2 Week 3 Thursday 11 March 2027 P1 Year A

A target copied from the plan is an actual measure

Measure the actual work and record the real value with its unit.

More tape always means a better product

Use only the tape needed for the approved joint. Keep the channel opening clear and recheck the purpose.

An adjustment can be invented for the log

Record a real need and change, or honest no change reasoning and a next step.

The making stage means tools can be used alone

The adult still gives the agreed supervision. Keep true pupil and adult roles in the record.

Cold call with response choice

Foundation: Point to the tab and the channel. Expected: the inside 20 mm tab and the shallow U that catches the card.

Middle: Why do we stop before cutting a 123 mm width again? Expected: it is outside the check range; remeasure and ask the adult to agree a safe correction.

Higher: How can a channel change improve the purpose? Expected: a checked shelf and upward front stop can help hold the actual card; only the real recheck shows the result.

What to retain

Retain actual work with date, design and plan references, true dimensions, method, pupil role, adult role, check results, every adjustment and reason, and any unfinished or pending stage. Do not claim a practical tool skill from an explanation alone.

The unit award

Use this record as evidence for the unit award only where it matches the actual criteria and observed pupil role. A weekly tick does not by itself confirm completion.
