Costing and review knowledge organiser

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

Weekly outcome 1 verbatim: Cost my product and present it (links Enterprise).

Weekly outcome 2 verbatim: Review D&T progress and add unit award evidence.

I can explain a materials cost, present my work in my own words, and review my progress with real evidence.

Today I can

[ ] I can show my material quantities, invented prices and total, or label an estimate.

[ ] I can explain my purpose, choices, test, change and cost in my own words.

[ ] I can check six outcome rows against real work and choose one next target.

The model sum

1 whole sheet × 30p = 30p. Three 10 cm tape lengths × 5p = 15p. Total 45p = £0.45 materials cost. Whole sheet and allowance include offcuts. Charge each allocation once.

Keep real and estimated work clear

Use actual adult-agreed quantities if known. Otherwise label a cost estimate. A model does not prove your product cost, making or test. You can still give an actual observed oral presentation about a clearly labelled planned-product estimate.

Closing review

Five weeks have six outcome rows because Week 5 has two. Choose Shown, More to do or Not yet seen against real evidence. Keep date, location, support, comment and a next gap.

Book first. Plan in any language. The unit award is not completed by a tick.

Materials cost model

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

Use these invented classroom values to practise. They are not supplier prices or actual cash spending. Your own sheet must say actual agreed allocation or estimate.

Resource	Quantity and unit	Invented price	Working	Subtotal
Thin card sheet	1 sheet 210 mm by 297 mm	30p per sheet	1 × 30p	30p
Paper tape issued allowance	3 lengths each 10 cm	5p per 10 cm length	3 × 5p	15p

Add the subtotals once

30p + 15p = 45p = £0.45 materials cost. A 60p budget would have 15p left. Labour, tools and overheads are unpriced; this is not the full business cost.

One whole sheet

The 210 mm by 297 mm sheet holds the 120 mm by 260 mm body in a 120 mm strip. In the remaining 90 mm strip, the channel can rotate to 30 mm by 100 mm and the 80 mm by 60 mm test card fits below it. Charge the whole sheet once, including offcuts and test card.

What the tape value means

The model issues three 10 cm lengths, totalling 30 cm. This allowance includes offcuts. It does not claim a pupil measured or used exactly 30 cm.

Keep the scope clear

A retained Week 2 mock-up is not recharged every week. If another trial used a separately allocated sheet or tape, include that allocation once with the real recorded waste. Different materials need their own adult-agreed invented values.

My materials costing sheet

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

In your book, use one row per agreed resource allocation. Mark actual allocation / estimate ___. Date ___. Product or planned design ___. Adult-agreed price source ___. No shop research is required.

Resource	Quantity and unit	Invented unit price	Working	Subtotal
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____

Total and a cost change

My materials total is ___ p = £___. One calculation I can explain ___. Planned allocation ___. Actual allocation or estimate ___. What changed ___. Its cost effect ___. Support used ___.

Check before you present

[ ] Keep planned, actual allocation and estimate separate. Name the quantity unit and invented unit price.

[ ] Charge the issued sheet once. Do not add the body, channel, test card or offcuts again. Do not recharge a retained Week 2 mock-up each week.

[ ] Record actual issued 10 cm tape portions if known. An unknown allowance is an estimate, not a measurement.

[ ] Add only a real allocated change. One extra 10 cm tape length adds 5p: 45p becomes 50p.

[ ] The model covers materials only. Labour, tools and overheads are unpriced, so this is not a full business cost.

What is still unknown

Material or quantity not recorded ___. Agreed allocation or price still needed ___. Actual product cost pending yes / no ___. My estimate assumptions ___.

Two minute presentation card

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

Plan 120 seconds. Use your own words about the actual work, or clearly label a planned-product estimate. Present privately to an adult or use an agreed accessible mode. You do not need a public audience, video or physical item.

Time	Focus	My own words or prompt
0 to 20 seconds	Problem and purpose	Who is the invented client? What must the stand do?
20 to 50 seconds	Choice and making	Which material and join? What did I do, and what help did I use?
50 to 80 seconds	Test and improvement	What actually happened? What changed and why? Name any gap.
80 to 100 seconds	Materials cost	State my actual agreed cost or labelled estimate, with one calculation.
100 to 120 seconds	Progress and next step	What have I learned? Which evidence shows it? What will I try next?

Before the talk

I will use speech / signing / supported explanation / other agreed mode ___. I will show or describe these real records ___. Model information or estimate I must label ___. Help I need ___.

Record what actually happened

Presented yes / not yet ___. Actual observed duration ___ seconds. Mode ___. Adult observation or evidence location ___. Actual help ___. One own-word explanation ___. What stayed pending ___.

The printed card totals 120 seconds; it does not prove the talk happened or lasted that long. A prepared script alone is planning evidence. Record the real duration and accessible support.

My D and T progress review

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

Look across five weeks and six outcome rows. Use real work. You may speak, sign, point to records or confirm a scribe's words. Keep your own judgement.

Design and planning

My problem and chosen idea ___. A real design or plan record at ___. One choice I can explain ___. Help I used ___.

Making and improving

One action I did ___. One action an adult did ___. A test or change record at ___. What it actually shows ___. An unfinished step or missing test ___.

Costing and presenting

My actual agreed materials cost / labelled estimate ___. A calculation at ___. Presentation actually shared yes / not yet ___. Mode, duration and support ___. My own explanation ___.

My view and next target

One thing I can now do better ___. The evidence is ___. One gap or question ___. My next target ___. The next chance or support I need ___.

Confirm the review

My words read back or checked yes / not yet ___. One correction I made ___. Review date and book page ___.

A tick or reflection records lesson evidence. It does not certify completion of the unit award. Missing practical evidence remains missing until it is actually collected.

An optional Enterprise comparison

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

Finish your cost, talk record and review first. This is a model. No sale or price search is needed.

Model value	Amount
Invented asking price	90p
Model materials cost	45p
Amount above materials cost	90p − 45p = 45p

What this does and does not show

45p is above materials cost. Labour, tools and overheads have no price in this model. The difference is not net profit. An asking price does not prove a sale.

Compare a real change or a labelled idea

One more issued 10 cm tape piece adds 5p. The model materials cost becomes 50p. At a 90p asking price, 40p is above materials cost before other costs. This is a model unless the extra tape was really issued.

Budget and asking price are different

A 60p materials budget minus 45p leaves 15p in that budget. This is different from 90p asking price minus 45p materials cost.

Your reasoning

My comparison uses an actual allocation / estimate / model ___. One cost not priced ___. Why I cannot call the difference net profit ___. One further question ___.

Only add the 5p finish-paper piece if it was issued. Otherwise label it as an idea. It is not in the 45p model total.

Presentation and evidence safety brief

Design and Technology LAUNCH Spring 2 Week 5 Thursday 25 March 2027 P1 Year A

This is a review lesson. No new cutting, joining or powered or heated tool is required. A safe, accessible explanation can use a drawing, a record or own words.

1 Today is costing, presentation and review. No cutting or new tool work is required. Keep tools returned and the work area clear.

2 The adult checks a real item before handling or showing it. Do not handle damaged or suspect edges. Use a drawing or actual record if the item is not safe or available.

3 Present privately to an adult or use an agreed accessible mode. No forced public display, peer audience, video or personal disclosure.

4 Any photo is object only with no people, names or identifying background. Do not upload work or private records through the lesson page.

5 A printed two-minute card is a plan. Record the real observed mode, duration and help; do not invent a presentation or earlier practical evidence.

If an item or record is missing

Tell the adult. Use only an actual available record or a labelled model. Keep practical gaps visible. Do not handle an unsafe item or recreate earlier evidence as though it happened before.

Materials free route

With no product, tools, paper, printer or device, hear the model prices. Use spoken sums and label your cost as an estimate. You may give a real private talk if an adult sees or hears it. Keep the actual mode, time and help. Use real work in your review, or name each gap. An adult can write your words and read them back. If no record can yet be made, the written record stays pending. Missing making, tests and actual product cost stay pending.

Type instead starts closed and exports a local text file. Keep private health records and personal details out of response boxes.
