Earthquake records and data cards

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Original learning summaries based on checked facts. No source extract, map or picture is reproduced. C codes identify the cards. G codes link to research titles and records in SOURCE_MANIFEST.json.

C1 A frozen online record

Selected British Geological Survey records, frozen on 30 October 2026. All times below are UTC. These are three observed events from October 2026, not a complete list, a forecast or a live March 2027 feed. Magnitudes and locations may be revised after more analysis. Read each column before comparing. Research basis: G1.

Code	UTC date and time	Region	Magnitude	Depth km	Latitude and longitude
A	25 Oct 2026 02:09:23.8	Bonin Islands, Japan	6.5	492	27.795 N 139.618 E
B	24 Oct 2026 02:31:30.5	Vanuatu	6.9	10	14.056 S 165.546 E
C	9 Oct 2026 17:56:10.1	Panama	7.7	12	7.587 N 80.769 W

Earthquake records and data cards

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

C2 Read the field and unit

UTC is a shared time standard. Magnitude reports the size of the event. Depth tells how far below the surface it began, in km. Latitude tells north or south. Longitude tells east or west. Do not swap a depth value for a map coordinate. A number needs its label. Research basis: G1, G2.

C3 Plot the place

Use whole degrees for a clear classroom plot. A is 28 N, 140 E. B is 14 S, 166 E. C is 8 N, 81 W. D2 models A. On D1 find the latitude first, then the longitude. Plot between the 30-degree grid lines and label the point. Keep the exact source coordinates in C1 unchanged. The grid has no coastlines. Research basis: G1.

Earthquake records and data cards

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

C4 Compare and question

Among A–C, A is newest on 25 October 2026. C has the largest magnitude at 7.7. B is shallowest at 10 km. A is deepest at 492 km. These claims use different fields. The table gives no damage totals. Large magnitude alone does not prove the largest impact. We also need evidence about people, buildings, ground conditions and protection. Three selected records cannot show a global trend. Research basis: G1, G2.

C5 Keep the historic case separate

H is the Tohoku region of Japan earthquake on 11 March 2011 at 05:46:24 UTC. The frozen comparison uses the current event record: magnitude 9.1, depth 29 km, latitude 38.297 N, longitude 142.373 E. For plotting only, use 38 N, 142 E. H continues the Week 1 case. It is historic, not a recent October 2026 event. Research basis: G3.

D1 World coordinate grid

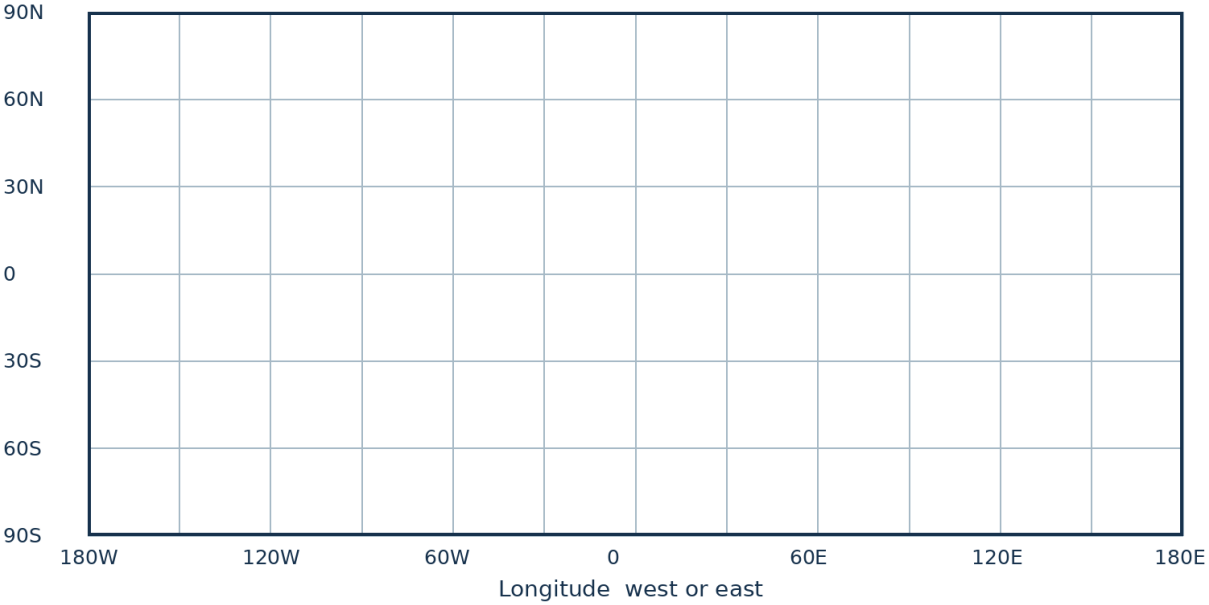

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

D1 World coordinate grid for plotting

Latitude: north or south. Grid lines every 30 degrees. Plot between lines.

Key: filled circle = selected observed earthquake. This grid has no coastlines.

Plot and label A–C. Use N or S and E or W carefully.

Original equirectangular coordinate grid. It has no coastlines and is for point plotting, not navigation. A filled circle represents a selected observed earthquake.

D2 A worked location

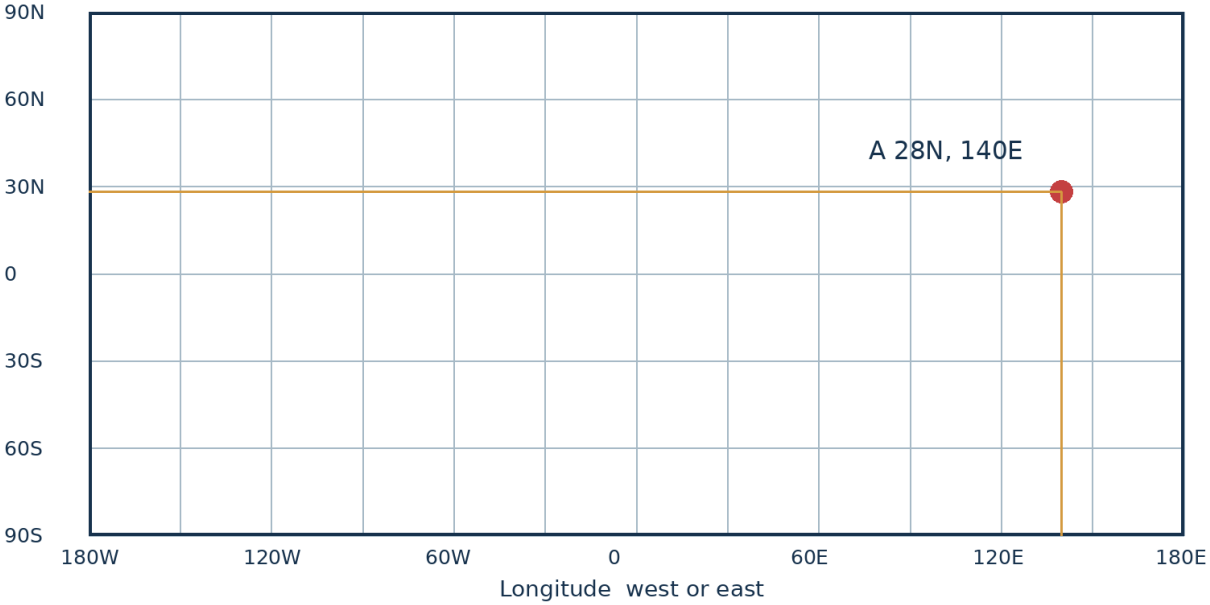

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

D2 Worked plot A

Latitude: north or south. Grid lines every 30 degrees. Plot between lines.

Key: filled circle = selected observed earthquake. This grid has no coastlines.

Trace the latitude north from the equator, then the longitude east from zero. Now plot B and C on D1.

Only A is modelled. Whole-degree coordinates are rounded for classroom plotting. The exact catalogue values remain in C1.

D3 Fields and limits

Tuesday 2 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 2 | HUM-LAUNCH-S2-W02

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

D3 Data key Each column has a different job

UTC date and time

When the event began, in one shared time standard.

Magnitude

A reported measure of the size of the earthquake.

Depth in km

How far below the surface the earthquake began.

Latitude and longitude

Where to plot it: N or S first, then E or W.

Impact evidence

Damage, people and services. These fields are not in this table.

Choose a value from C1. Point to its matching field and explain what it tells you.

Field labels matter. Magnitude, depth and date answer different questions. This key does not predict future events.
