Analyse data and write a hazard report

Tuesday 23 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 5 | HUM-LAUNCH-S2-W05

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Supported | HUM-LAUNCH-S2-W05-E1 and E2

Learning outcome: Analyse hazard data (spreadsheets); digital report.
Hazard case-study report (Mar).

1 Use C1, C2 and the data key. Find the newest recent record and shallowest depth. Calculate at least one gap: C minus A magnitude values or A minus B depth. Keep your own method and a limit. The worked MAX is only an example.

2 Use C3 and C4 for Japan, 11 March 2011. Plan the cause, one direct shaking effect and one secondary tsunami effect. Explain a protection measure and a preparation measure.

3 Use C5 and the blank report template or your book. Give your own judgement about a useful measure and its limit, including why warning is not exact prediction. Add your data finding separately and explain what it cannot prove.

Partner check

Analyst makes one finding and explains the method. Evidence Checker verifies the record code, field, value and unit or date, then asks what is missing. Swap roles. Each learner keeps their own analysis and report. A partner or model does not provide evidence for both.

Frames for reasoning

My recent-data finding is ____, supported by ____. I found the gap by ____. This cannot prove ____. In Japan on 11 March 2011, ____ because ____. This caused ____. The measure ____ helped by ____, but ____. My judgement is ____ because ____.

Keep Vocabulary_Mat and Support_Cards, including the small MAX model, beside this route. The model is not your own evidence.

My own finish

Keep your own data findings, at least one computed comparison and a limit; then an individual Japan 2011 report with cause, primary/secondary effects, protection/preparation and a warning/prediction limit. Make a supported judgement. Actual hand, digital or directed mode and help are recorded. In your book, keep your own response. Use linked notes, a labelled diagram, a short paragraph or a private explanation with exact scribing. Plan in any language. Record actual help. A private pause is available.

Analyse data and write a hazard report

Tuesday 23 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 5 | HUM-LAUNCH-S2-W05

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Independent | HUM-LAUNCH-S2-W05-E1 and E2

Learning outcome: Analyse hazard data (spreadsheets); digital report.
Hazard case-study report (Mar).

1 Use C1 and C2. Keep own newest/shallowest findings, at least one computed gap with its method, and a valid data limit. Use the printed table or the offline workbook; record what you actually did.

2 Write your own Japan 2011 report using C3–C5: cause, primary and secondary effects, protection and preparation, and a warning/prediction limit. Use source codes and because links.

3 Judge how a chosen measure helps and why it has limits. Keep recent-record analysis separate from historic impact evidence. Use about 100–150 words, linked notes or an exact directed response.

Partner check

Analyst makes one finding and explains the method. Evidence Checker verifies the record code, field, value and unit or date, then asks what is missing. Swap roles. Each learner keeps their own analysis and report. A partner or model does not provide evidence for both.

Frames for reasoning

My recent-data finding is ____, supported by ____. I found the gap by ____. This cannot prove ____. In Japan on 11 March 2011, ____ because ____. This caused ____. The measure ____ helped by ____, but ____. My judgement is ____ because ____.

Keep Vocabulary_Mat and Support_Cards, including the small MAX model, beside this route. The model is not your own evidence.

My own finish

Analyse data and write a hazard report

Tuesday 23 March 2027 | P2 | 40 minutes | Year A

Humanities | LAUNCH | Spring 2 Week 5 | HUM-LAUNCH-S2-W05

White paper version. Read quietly, point, write, type, speak privately or direct a scribe who reads your words back. You may pass. No public answer or reading aloud is required.

Route Aspire | HUM-LAUNCH-S2-W05-E1 and E2

Learning outcome: Analyse hazard data (spreadsheets); digital report.
Hazard case-study report (Mar).

1 Complete the same own analysis and dated Japan report as the Independent route. Add both numerical gaps if useful, keeping magnitude differences separate from energy multipliers.

2 Evaluate the recent sample and historic case sources: explain what each can show and what more evidence would be needed. Do not infer a trend or predict an event.

3 Compare two management approaches and make a supported judgement about combining them. State a limit and why no measure removes all risk. Record actual method, authoring mode and help.

Partner check

Analyst makes one finding and explains the method. Evidence Checker verifies the record code, field, value and unit or date, then asks what is missing. Swap roles. Each learner keeps their own analysis and report. A partner or model does not provide evidence for both.

Frames for reasoning

My recent-data finding is ____, supported by ____. I found the gap by ____. This cannot prove ____. In Japan on 11 March 2011, ____ because ____. This caused ____. The measure ____ helped by ____, but ____. My judgement is ____ because ____.

Keep Vocabulary_Mat and Support_Cards, including the small MAX model, beside this route. The model is not your own evidence.
