First aid and staying safe

Aspire · Thursday 25 March 2027 · P4 · Year A

Basic first aid & health emergencies.

Relationships & staying-safe task.

Core ideas

• Check scene safety and response. Call 999 immediately for an adult who is unresponsive; shout for help and use speakerphone.

• Follow the call handler. Gasping or abnormal breathing is not normal and needs the CPR pathway.

• The recovery position helps keep the airway open when an adult is unresponsive, breathing normally and has no suspected injury; keep monitoring.

• A safety worry can be shared with a trusted adult or safeguarding lead. A person need not meet alone or give up a boundary to settle a frightening conflict.

The invented model

An adult stops responding while resting. There has been no fall or injury. Character A checks that it is safe to approach, checks for a response and shouts for help. A calls 999 at once on speakerphone and follows the call handler's instructions. The adult is breathing normally.

A visible reason

The call is made before waiting to finish a breathing check. The call handler can help with checking breathing. With normal breathing and no suspected injury, the recovery position can help keep the airway open. A stays if safe, monitors breathing and tells the call handler about changes.

Use the full cases in Support Cards. Reader and checker may swap, or work alone. Keep the glossary and usual aids. Use words, pointing, drawing, typing or the usual communication aid. An adult may scribe the learner's exact words and read them back. Plan in any language. Record access aids separately from prompts that supplied content.

Aspire book tasks

In your book or usual mode, use the fictional cases only. No personal stories are needed.

Task 1

Compare two plausible actions in each adult case and justify which must take priority.

Task 2

Explain how suspected injury changes the recovery-position choice without inventing a treatment.

Task 3

Evaluate the relationship advice in the closing task and improve it using a clear safety reason.

Closing prompts are on the last Support Cards page. Complete each taught focus using your own reason. The recovery-position reference has six steps and states when it may be used. Do not practise on a person or make a real call.

Words and frame

Unresponsive · Normal breathing · Recovery position · Boundary · Commitment

The story shows ___. This matters because ___. The character could ___ and ask ___ for help.

Learning self check

In your book, choose Ready to explain, With a prompt or Need another example for each learning point. All choices start blank. This is a learning check, not a judgement about health, family life or safety. Pass is valid.

- Choose early emergency help for an adult who does not respond.
- Explain when the recovery position is used and order its steps.
- Use learning from the taught weeks to explain safe relationship choices.

Review and help

Keep the first try. Use one next step and reply in the same colour, on the same page or usual mode. A character can tell a trusted adult or the safeguarding lead privately. If the first adult is away or does not help, try another trusted adult. If there is danger now, get urgent help. No one needs to prove a worry before asking for help.
