Enterprise planning knowledge

White standard edition

Plan a product/service to sell.

A plan someone can follow

State one product or service, its intended customer and the need it could meet. List resources honestly. The plan remains provisional where materials, time, skills or permissions are not yet confirmed.

Jobs in a useful order

Break the work into small jobs. Give each job a role code, needed resources and a check for safe, useful work. Agree which job comes first and what must be checked before the next job. One person may have more than one job, with adult cover if someone is absent.

Quality before a future offer

Quality means the offer does its intended job well. A label should be readable and care advice accurate. An adult checks actual plants, safe materials and permission before any future offer. A plan or mockup is not a finished product, a confirmed customer or a sale.

Enterprise planning knowledge continued

White standard edition

Invented model plan only

Offer: a labelled starter-plant pot with a care card.
Intended customer: a beginner grower.
Useful need: clear instructions for getting started.

Resources to check: suitable approved starter plant, clean pot, label, pencil, care card, time and adult help.

Invented job order

1 Adult checks suitable stock, materials and permission.
2 Prepare a readable generic label.
3 Draft accurate care advice in our own words.
4 Arrange the approved parts under adult guidance.
5 Check quality before any future offer.

This example is not confirmed stock, an actual customer or completed work. A service plan would need its own agreed task, time, supervision and quality checks.
