Production and quality jobs

White standard edition

Produce & prepare the product.

Trial one part

1 Confirm the offer and safe role with the adult.
2 Make or inspect one paper label or care-card part.
3 Check readability and adult-approved advice.
4 Add the making jobs and checks to the Production Plan.

Invented model only

A labelled starter-plant pot with a care card could help a beginner grower. Actual plants and care advice need adult checks. A real label may be finished while the whole offer is still incomplete.

Production and quality jobs continued

Agree the jobs

Use Production Plan in your book or ask for scribing. Record the actual quantity, resources, job order and role codes. Mark unknown materials to check. Keep clean paper jobs separate from soil work.

My one line

My production job is ____; I will keep it safe by ____.

Finish safely

Record whether you made a trial part or planned a job. Return tools and materials, clear the table and wash hands after gardening contact. Park materials and tell the adult before a quiet pause.
