Starter

The test note gives a method, six sheets and five successful results. It does not support best for every task.

Model

M has dated observations of three trials around 20 minutes. N gives a five-minute claim without data. Prefer M for those trials; keep uncertainty about future trials.

Source checks

A: organiser; 12 November; inform; current plan. B: seller; 1 September; sell; no timings. C: observer; 14 November; record; three timings and kit loans.

A justified decision

A is a useful current plan. C supports it with three timings and kit loans. I would plan for about 30 minutes and use the supplied kit. I would still check that these details apply to the next session.

Acceptable alternatives

A may be the main source because it states the plan; C may be the main source because it records checks. Either is defensible with relevant comparison. B alone is weak for kit and time. Do not require the model wording.

Unanswered questions

How many places are available? Do the same kit and time details apply next time? Does a session ever run longer? Accept a relevant question not already answered by the cards.

Checks and feedback

Tuesday 17 November 2026 | P6 | 40 minutes

Hinge

No: a new date does not supply evidence for best for everyone. If either learner relies only on date or layout, re-model evidence and purpose before independent work.

Parallel hinge

Two pages repeating the same advert are not two separate tests. Look for another evidence source, not a duplicate claim.

Aspire

Three records support about 30 minutes for the observed sessions. They cannot guarantee every future session. A newer unsupported advert remains unsupported. Selling purpose does not automatically make each claim false.

Exit

No: one observed session took 13 minutes, so always 12 is contradicted. Two trials would not justify always anyway.

Possible next steps

Add a specific detail from a second source. Explain how the detail affects the choice. State what the evidence cannot show. Use only one next step per learner.

Support record

Separate access support from reasoning prompts. Record exact scribing, pointing cues and adult typing. Do not use a shared or model file as individual evidence.
