Why day turns to night

I am learning to: Show why day turns to night and why the Sun seems to move.

Light reaches one side of Earth. This model is simplified and not to scale.

Words

Word	What it means	Example	My language
rotation	one turn around an axis	Earth’s rotation brings day and night.	
axis	an imagined line a planet spins around	Earth turns around its axis.	
shadow	an area where an object blocks light	The ball makes a shadow on the desk.	
orbit	a curved path around another object	Earth’s orbit takes it around the Sun.	

How I know

- I can point to the day and night sides.
- I can turn the model and explain when night comes.
- I can explain why the Sun seems to move.

Say it before you write: The dot has night when ____ because ____.

You can plan in any language.
