The shapes of Sun, Earth and Moon

I am learning to... show how a ball models the Sun, Earth and Moon.

Words

Word	It means	Example	My language
spherical	shaped roughly like a ball	Earth is approximately spherical.	
curve	a line or surface that bends	The ball has a curved surface.	
shadow	a dark area where an object blocks light	The ball makes a shadow on the card.	
model	a simple way to show an object or idea	A ball is a model of Earth's shape.	

Look at the model

The disc is flat. A ball has a curved surface even when turned. Simplified shape model; not to scale.

How I know

I can choose a ball to model a round body.

I can turn it to show more than one side.

I can name one limit of a model.

Say first: When I turn it, I see ____ because ____.

You can plan in any language.
