Investigating a science question

I am learning to... plan a fair investigation, record a result and explain a limit.

Words

Word	It means	Example	My language
variable	a factor that can change in a test	The surface is our changed variable.	
fair test	a test that changes one key factor and keeps other key factors the same	We use the same toy in both runs for a fair test.	
result	what you observe or measure in a test	Our result is the distance the toy travelled.	
repeat	do the test again under the same conditions	We repeat each run to check our result.	

Look at the model

Use the same toy and start line. Change only the surface; measure distance. End marks are examples, not results.

How I know

- I can name what I change and what I keep the same.
- I can record what happened in a small test.
- I can explain one way to make the test more dependable.
- Say first: I changed ____ and kept ____ the same. My result was ____.
- You can plan in any language.
