

I am learning to weigh a possible benefit and risk of stem-cell research using evidence.

Words to use

Word	Meaning	Example	My language
stem cell	a cell that can divide and form specialised cell types	Stem cells are being studied for possible medical uses.	
benefit	a possible helpful result	A possible benefit would be replacing damaged cells.	
risk	a possible harmful result or uncertain effect	A study must consider a risk to volunteers.	
evidence	information that tests or supports a claim	The trial needs evidence of both benefit and harm.	

Model

Fictional proposal: weigh a possible benefit and risk against evidence. Simplified decision aid; no medical decision is made here.

A fictional proposal may replace damaged cells. A possible harm is unknown. A careful study must measure both benefit and risk; possible use is not proven treatment.

How I know

I can name a possible benefit and risk.

I can ask for evidence that tests a claim.

I can justify further research without claiming a cure.

You can plan in any language. Speak before you write: Speaking: “I would recommend ... because ...; I would also check ...”
