

A simple genetic cross

Today I can... ☐ I can pair one allele from each parent. ☐ I can find the aa chance in four squares. ☐ I can evaluate why probability does not guarantee an exact count.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Arrival

Look at this week's letter tiles A and a. Point to one detail you notice.

My response

Starter

Recall three ideas from earlier lessons. Show one answer at a time.

1. What is a gene?

2. What do stem cells do in growth?

3. Where are chromosomes found in an animal cell?

A simple genetic cross

Today I can... ☐ I can pair one allele from each parent. ☐ I can find the aa chance in four squares. ☐ I can evaluate why probability does not guarantee an exact count.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Talk-then-sort

Complete the missing step in the part-done model. Speak, then match the cards.

Aa × aa: top A, a; side a, a. First row Aa, aa; second row ____, _____. Chance of aa: ____ out of 4.

Choices: Aa · aa

Card or step	My group or match
Top A with side a	
Top a with first side a	
Top A with second side a	
Top a with second side a	

Calculate the aa probability for Aa × aa. Evaluate an exact-count claim about real offspring.

Independent F

Complete Aa × aa with allele tiles.

Top ____ and side ____ make ____.

My response

Independent M

Calculate and justify the aa probability from the grid.

I count ____ aa squares out of four, so ...

My response

A simple genetic cross

Today I can... ☐ I can pair one allele from each parent. ☐ I can find the aa chance in four squares. ☐ I can evaluate why probability does not guarantee an exact count.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Independent H

Evaluate an exact-count claim about four real offspring.

The grid shows a chance, not a promise, because ...

My response

Go deeper

Compare aa chances for $Aa \times Aa$ and $Aa \times aa$ with a second grid.

My response

Correct a faulty grid that gives an Aa parent two A headings; explain its wrong probability.

My response

Exit

Show what you know with a model and explain one reason.

My exit response

My feedback was ... Name what you heard at Review.

Next I need to ... Check the top and side alleles before giving a chance.

Word help

Word	Meaning	Example	My language
allele	a version of a gene	A and a represent two alleles in our invented model.	
genotype	the pair of alleles shown by letters	Aa is one possible genotype in this model.	
dominant	an allele shown by one copy in this simple model	A is dominant in our invented flower model.	
recessive	an allele shown when two copies are present in this model	aa shows the recessive version in our model.	
Punnett square	a grid that shows possible allele pairs	The Punnett square for $Aa \times aa$ has four cells.
