

Cells and genetics check

Today I can... ☐ I can order copy, separate and split for mitosis. ☐ I can mark one gene as part of DNA. ☐ I can use a simple cross as probability, not a promise.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Arrival

Look at this week's familiar cell and allele models. Point to one detail you notice.

Mitosis

matching sets

Gene

on DNA

Cross

	A	a
a	Aa	aa
a	Aa	aa

possible pairs

My response

Starter

Recall three ideas from earlier lessons. Show one answer at a time.

1. Which named source supports our cystic fibrosis card?

2. How does a gene relate to DNA?

3. Which part of an animal cell holds chromosomes?

Cells and genetics check

Today I can... ☐ I can order copy, separate and split for mitosis. ☐ I can mark one gene as part of DNA. ☐ I can use a simple cross as probability, not a promise.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Talk-then-sort

Complete the missing step in the part-done model. Speak, then match the cards.

Parallel example: the chromosome sets are copied. Mitosis moves the sets to ____ nuclei; the evidence detail is ____.

Choices: Cell model · DNA model · Cross model

Card or step	My group or match
Two matching chromosome sets	
Short marked part of a DNA string	
Four possible allele pairs	

Complete a short three-part check: order copy/separate/split, mark a gene on DNA, and use $Aa \times aa$ to state a possible pair and chance.

Independent F

In the independent check, order the three stages and mark one gene on the model.

First ...; then ...; last ...

My response

Independent M

Explain matching body cells and why a gene is only part of DNA.

The model shows ... because ...

My response

Cells and genetics check

Today I can... ☐ I can order copy, separate and split for mitosis. ☐ I can mark one gene as part of DNA. ☐ I can use a simple cross as probability, not a promise.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Independent H

Use $Aa \times aa$ to reject the claim that a probability promises an exact family count.

The model chance is ...; the real count may differ because ...

My response

Go deeper

Which model feature supports an explanation that transfers to a fresh example, and which detail is only the model?

My response

After submitting the check, compare two wrong cross explanations. Name each misconception and a precise repair without altering the checked answer.

My response

Exit

Show what you know with a model and explain one reason.

My exit response

My feedback was ... Name what you heard at Review.

Next I need to ... Choose one model error you found; repair it and explain that change in the next lesson.

Word help

Word	Meaning	Example	My language
mitosis	division of the nucleus to separate matching chromosome sets	Mitosis helps make matching body cells.	
gene	a section of DNA that codes for a protein	A gene is a part of the DNA string.	
allele	a version of a gene	A and a stand for two alleles in our invented model.	
evidence	a fact or model detail that supports a claim	The labelled chromosome sets are evidence for my answer.
