Support adult brief

Year A | Autumn 2 · Week 1 | 3 November 2026

Term theme: Identity & Belonging. Careers: checking counters and displays in software testing.

Aim: each pupil creates two named score variables and sets both to zero under the start event using fictional project cards.

Use card A or B only. Keep real personal details out.

Ask the pupil to name each variable before building.

Point to the variable drop-down menu, then let the pupil choose.

Keep instructions short and allow time to act.

Read a card rule back exactly if asked.

Switch shared-device roles after six minutes.

Check each pupil’s own saved and reopened project file.

Record real prompts, adult typing and scribing.

At the exit, ask the pupil to show both reset blocks and explain why scores reset to zero on start. Give one next step and hear the response. Paper work is rehearsal for the digital checks.
