Staff answers and checks

Starter: a suitable slate can cover a roof (Autumn 2 Week 4); the water test checks whether water passes through a sample (Autumn 2 Week 3); people and animals get nutrition from food (Autumn 1 Week 5). Autumn 1 is the prior half-term. Check actual taught coverage before asking.

Model: raw rock is natural; a finished brick is made by people from clay. The drawing shows raw clay, shaping/firing and a finished brick. It is simplified and not to scale. The shared missing group is Human-made. Do not fill the learner's blank in advance.

Sort in source order: Raw rock / Leaf on a branch are Natural raw item. Finished clay brick / Glass bottle are Human-made item. Keep the distinction between the raw material and the finished item. A made object can contain natural materials.

Step check: first, Brick | Human-made. Hinge: C, third, A human-made glass item. A confuses raw sand with the finished bottle; B calls a finished item raw; D misses the supplied grouping. The source description of making glass is simplified; the finished bottle is the classification target.

Staff answers · task, limits and next move

Parallel hinge: people cut wood and assemble a chair. The finished chair is human-made. For the pair, hear each independent choice and reason; do not turn a class percentage rule into a score. Re-model the raw-rock row for an unsure learner, then use the chair check.

Supported sorts one raw and one made item and fills one row. Independent sorts four and adds two rows. Aspire explains clay versus brick and may use the mixed-item challenge. An object made from two materials needs a clear item row with both materials named, rather than a false single-source claim.

Misconceptions: natural raw ingredients do not make the finished object a raw item; place clay and brick in separate rows. A table carries row and column information: name the item column and group column and add an accurate row. Accept point, sign, speech or exact scribing with a clear link to the row.

Keep the learner’s row, feedback and self-edit. Exit shows the row to a real adult and chooses the next start. Source task words and order remain. Next weekly line: Plan and carry out a simple fair test on rocks. Career link: a maker selects and changes materials for a finished item.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-BUILD-A2-W05 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve Make a row for raw and made items. and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 6. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
