Staff answers and checks

Arrival Supported: locate the claim, rover distances and friction reason; complete with a useful added clue or explanation. Independent: claim/evidence/reason; keep the first to show the pupil's actual change; a useful audience question asks how friction links evidence and claim; add relevant repeated distances to Fabric slowed it. Aspire: clarification keeps pupil meaning; extra words are not extra evidence; one rover/two surfaces is limited; no change can be justified when the answer already meets the question and evidence.

Starter first choice: add repeated distances and explain friction. Preserve a first idea before the model; no automatic score. Practice data: smooth 46, 44, 45 cm; fabric 18, 20, 19 cm. Every fabric value is lower. Ranges 44–46 cm and 18–20 cm are correct. They are worked classroom practice data, not a new test or a measured result from these pupils.

CER builder in source order: Claim, Evidence, Reason, Weak, Weak. Smooth is better supplies no mechanism. One 46 cm value ignores the repeated comparison. The adult asks how friction explains the difference; the pupil chooses the improvement.

Hinge first/strong: the claim, repeated evidence and friction reason answer the same question. Praise and unrelated space facts do not answer the rover question. A useful parallel check asks which addition links the day/night model observation to Earth's rotation.

Staff answers · task, limits and next move

Lab: six cards pair by Forces, Space and Climate. Forces answer uses repeated rover distances plus friction, with the one-rover/two-surfaces limit. Space answer uses a marked place turning into/out of light and Earth's rotation, with a not-to-scale lamp/globe limit. Climate answer uses outgoing infrared absorption and return towards the surface, reducing net energy loss and increasing the global average, with arrows that show direction rather than amounts, times or all feedbacks.

Glitch second/repair: relevant claim, evidence and reason determine strength. Length alone and an inflexible one-sentence rule do not. A secure scientific answer may stay unchanged if the pupil gives a reason tied to relevance, evidence and a fair limit.

Supported identifies parts of one embedded topic answer and communicates it. Independent answers one question, receives one audience check and revises one part. Aspire answers a second topic, compares evidence strength and justifies revision or no change, with a fair limit. Preserve source meaning and the pupil's ownership; an adult must not rewrite an answer into a higher-quality response.

Exit: Supported points to a change; Independent explains how Audience clarified the science; Aspire justifies change or no change using relevance, evidence and limitation. Real Audience precedes Influence. Secure: transfer/fade. Mixed: contrast and recheck. Misconception: counterexample then fresh question. Access: change mode/load, keep goal. Method/evidence: keep first record, repair evidence and retry. No click auto-awards Audience, R, E or understanding.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-GROW-A2-W05-P2 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve one pupil-owned first answer, real adult read-back, a chosen next move and a revised answer or justified no change and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 6. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
