Use: Show what you know about body science | BUILD Science

Today I can… ☐ Show one idea about bones. Show how we move. Show what food does and where it comes from. ☐ Use because to join two science ideas. ☐ Use a model or the evidence. Show how it backs up what you say.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R ☐ [//] ☐ [?]

Knowledge organiser

Reference only · record answers in your book.

I can use models and evidence to show what I know about skeletons, muscle pairs, nutrition, balance and food sources.

Words

Word	It means
skeleton	the bones in your body. They hold you up and keep parts safe
joint	a place where bones meet and move
contract	a muscle gets shorter and pulls
nutrient	a part of food that helps your body grow or work
vertebrate	an animal. It has a backbone inside its body
food chain	a path showing what eats what

Skeletons and classification

The skull keeps the brain safe. The ribs keep the heart and lungs safe. Bones hold the body up. A vertebrate has a backbone. An invertebrate has no backbone.

Bones hold us up and keep parts safe. They help us move. Dog: backbone. Earthworm: no backbone.

Blue shapes show bones.

A muscle pair

Bend the elbow: the biceps contracts and pulls. The triceps relaxes. Make the arm straight: the triceps contracts and pulls. The biceps relaxes.

Use: Show what you know about body science | BUILD Science

Bend the arm. The biceps contracts: it gets short and pulls the bone. The triceps relaxes: it lets go. To make the arm straight, they swap jobs. Both muscles pull. They do not push. This simple model leaves some parts out.

Blue shows bones. Pink and orange show the two muscles.

Nutrition and body jobs

Carbohydrate gives energy. Protein helps us grow and mend. Calcium helps our bones and teeth. A food has more than one nutrient. Eating a range of foods gives us a mix of nutrients. The sugar per 100 g is just one part of what we know about a food.

Balance and evidence

Narrow feet: the model stayed up 2 times out of 5. Wide feet: it stayed up 5 times out of 5. Both models had the same height and mass. They had five taps that were alike. These numbers were made up to help us learn.

Made-up model results. Both have the same height and mass. Each had five taps that were alike. Wide feet kept this model up more often.

Blue shapes show the model.

Narrow 2/5 Wide 5/5

Food sources and transfer

GRASS → RABBIT → FOX. Grass uses light to make food. Follow each arrow. Food and energy pass to the animal that eats it.

Each arrow points from food to eater. Food and energy move this way. Grass makes food using light.

Green boxes show the plants and animals in the chain.

Connected explanation

Food gives us energy. Muscles use it to contract and pull bones at joints. The model helps us see how this works. A real body has more parts than the model shows.

Model steps

The biceps contracts and pulls on the forearm.

The triceps relaxes while the elbow bends.

For the reverse movement, the partner muscle pulls.

How I know

Show one idea about bones. Show how we move. Show what food does and where it comes from.

Use because to join two science ideas.

Use a model or the evidence. Show how it backs up what you say.
