

Choose Rock for the Job

I can choose a supplied rock sample for a stated model job and justify the decision with relevant property evidence and a limit.

BRIEF

what the job needs

COMPARE

use relevant evidence

DEFEND

receive and use a question

[Open the original interactive lesson](#)

What success looks like

- Use the job brief to select the relevant evidence columns.
- Compare at least two supplied candidates before choosing.
- Give a because decision, identify one limit and respond visibly to an audience question.

Retrieve and reconnect

- Last lesson: give one job-property because link.
- Last lesson: why could a drainage job value water movement?
- Last week: explain one careful sample-specific result.
- Lead-in: what makes a comparison stronger than choosing the first sample?

For a rain-cover model, Sample R lets 0.5 mL through and forms flat pieces. Sample P lets 1.0 mL through but has the faintest scratch mark. Which is the stronger first choice for this brief?

Think first. Point, say, sign or write your choice. Give one reason.

- A. Sample R, because its lower water passage and flat overlapping shape answer this brief.
- B. Sample P, because scratch resistance must decide every job.
- C. Choose whichever colour the group likes most.

Look closely · what is the evidence?

Brief need: help limit water below and overlap across the model roof.

R evidence: 0.5 mL through; flat-piece source card; moderate scratch mark.

P evidence: 1.0 mL through; block shape; faint scratch mark.

Look closely · what is the evidence?

Rain-cover for the learning yard

Needs: low water passage · some scratch resistance

appearance does not matter here

Code	Scratch	Water (120 s)	Look
A	line gone	0.0 mL	speckled
C	groove	8.0 mL	sandy
D	faint groove	1.5 mL	pale
F	stopped	9.5 mL	holey

Code	Scratch	Water (120 s)	Look
A	line gone	0.0 mL	speckled
C	groove	8.0 mL	sandy
D	faint groove	1.5 mL	pale
F	stopped	9.5 mL	holey

Why not D?" — a fair question. Answer with a column

The job brief

The evidence matrix for four codes

Code A highlighted with an audience question

Words we will use

- criteria — the job rules
- candidate — one possible choice
- justify — give evidence for why

Watch the model

- Underline the criteria and circle only the evidence columns that answer them. Ignore colour unless appearance is named in the brief.
- Compare two or more candidates on the same relevant columns. Do not add scores from unrelated properties just to create a winner.
- Choose and justify: For this model rain cover, R is the stronger supplied candidate because less water passed and its source card says it forms overlapping flat pieces.

Watch the model

Code	Scratch	Water (120 s)	Look
A	line gone	0.0 mL	speckled
C	groove	8.0 mL	sandy
D	faint groove	1.5 mL	pale
F	stopped	9.5 mL	holey

Evidence matrix

For a hard-wearing path model, which decision uses the most relevant supplied evidence?

- A. Choose P because it had a faint scratch mark and the surface card shows a stable, even path piece; keep grip as a separate safety check.
 - B. Choose D because its pattern is the most colourful.
 - C. Choose R because it let the least water through, even though the brief is about wear and walking surface.
- Commit to an answer. Show the evidence you used. Listen, then revise if needed.

Build the explanation

- Add one limit before the audience responds: the evidence describes supplied samples in classroom tests, not every specimen or real installation.
- Invite a question about criteria, evidence or a missing check. Repeat the question, then point to the matrix row it tests.
- Make a visible change when the question exposes missing or stronger evidence. If the choice stays, record why the evidence still meets the criteria and name one transfer step.

Find and repair the misconception

Decision glitch: add every property score and choose the biggest total, even when some properties do not matter to the brief.

A. Keep it: every property should count equally for every job.

B. Repair it: compare candidates using the criteria and evidence relevant to this stated purpose.

C. Repair it: replace evidence with a class popularity vote.

Rock-choice evidence matrix

Route each candidate evidence card to RAIN COVER, PATH, INDOOR DISPLAY or NEEDS ANOTHER CHECK.

- Read the brief criterion.
- Compare the candidate evidence.
- Commit the strongest relevant match or flag a gap.
- Freeze a choice, then rehearse the justification and limit.

Use the numbered cards in your pupil pack. Take turns to choose, justify and check. You may direct a partner to move a card.

Choose a group · defend your placement

- RAIN-COVER MODEL
- HARD-WEARING PATH MODEL
- INDOOR DISPLAY
- NEEDS ANOTHER CHECK

Say: I chose ___ for the model ___ because ___. Candidate ___ was weaker because ___. The matrix cannot tell us ___.

Your independent mission

Choose a supplied candidate for one model job, compare at least two options and revise or confirm the decision after a genuine audience question.

Record: Brief criteria, two-candidate comparison, chosen candidate, relevant because evidence, one limit, one audience question and visible response.

Choose your support and challenge

- Supported: Choose between two candidates for one brief and complete an oral, pointed or scribed because sentence plus one question-mark limit.
- Standard: Compare three candidates on relevant criteria, justify one choice and revise or confirm it after an audience question.
- Stretch: Evaluate a trade-off, defend why one tempting candidate is unsuitable and explain how the decision would change for a different purpose.

Show what you know

State your choice, strongest evidence and one limit after the audience response.

Point to, read or explain the evidence you made. Choose one next step after the adult has listened.
