

Fossil Formation Story

BUILD • Science • 40 minutes

Sequence the main stages by which remains or traces can become fossils over a very long time and distinguish evidence from a compressed story.

Prepare before pupils arrive

Print the pupil pack and open Lesson.pptx. Keep the uploaded HTML available for its live controls. Prepare any approved atlas/source extracts, existing learner work, authorised local data or prior planner named in the source lesson.

Wait, receive and use the least prompt needed.

Keep adult action separate from pupil authorship.

Staff card: preserve the learning goal; change modality before changing demand.

Modal guidance carrier.

A fossil-formation sequence · entry map: More layers can build and compact over a very long time as minerals and rock processes preserve evidence. Link that anchor only when this second detail is relevant: Later movement or erosion may expose a fossil; Mary Anning used careful observation of real fossils as evidence about life long ago. For this a fossil-formation sequence decision, use a printed choice, object placement, short phrase, symbol response or learner-directed mark; the learner still chooses the evidence, order, comparison or action. Staff supporting a fossil-formation sequence may steady the named materials and read the displayed source exactly. They do not upgrade the a fossil-formation sequence response, fill its missing result or convert its plan into completion. If access to a fossil-formation sequence stalls, pause, lower visual density or move to the printed route while keeping the same reasoning demand.

For review or assessment lessons, prepare the centre-approved questions, outcomes and existing learner records. Practice cards and a completed worksheet do not supply missing assessment evidence.

Access and participation

Offer reading aloud, pointing, signing, quiet thinking, a no-touch route and exact scribing where these support the learner. Keep the same subject decision. In shared work, let each learner commit before feedback; use a partner as card mover or checker, then swap. Avoid public speed rankings.

Uploaded outcome: Describe how fossils are formed over a very long time (Mary Anning).

Uploaded workbook locator: 'BUILD Weekly - Spring'!C28

40-minute teaching sequence

Stage / total time	Teaching move	Adult support / response
Arrival · 3 min	Rapid burial can reduce disturbance and place remains beneath sediment. Soft material usually changes or decays while harder parts, impressions or traces may remain.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
Starter · 3 min	Picture first: the soft parts have gone; the hard parts are being covered. Which step comes next?	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
I do · 4 min	Fossil formation sequencer Choose the five steps in order. Then answer the honesty question.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
We do · 3 min	More layers can build and compact over a very long time as minerals and rock processes preserve evidence. Later movement or erosion may expose a fossil; Mary Anning used careful observation of real fossils as evidence about life long ago.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
I do 2 · 3 min	Available evidence Rapid burial can reduce disturbance and place remains beneath sediment. Reasoning move Soft material usually changes or decays while harder parts, impressions or traces may remain.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
We do 2 · 4 min	Supported Order five picture cards and match one prepared explanation to each stage. Standard Order and explain the stages using burial, sediment, change, preservation and exposure.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.
Independent · 16 min	Build a fossil-formation strip from the supplied cards. Add a short explanation beneath each stage, include 'over a very long time', and place one caution card showing that many remains never become fossils.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.

Stage / total time	Teaching move	Adult support / response
Exit · 4 min	Point to one transition in the sequence and explain what changes. The adult repeats the stage without making it certain for every fossil.	Wait, receive and use the least prompt needed. Keep adult action separate from pupil authorship.

The timing belongs to the whole stage. Several PowerPoint slides may share it; do not restart that time on every slide. Full source-stage text is in the PowerPoint speaker notes and original HTML.

Answers, evidence and feedback

This is an open evidence task. Judge accuracy against the supplied source or approved mark points, the evidence chosen, the explanation and the stated limit. A personal preference or self-rating has no single correct answer.

Record the teaching response

What the learner actually showed	Next teaching action
Secure explanation with evidence	Reduce content prompting; offer another example or a limitation.
Partly correct / mixed	Point to the deciding evidence and invite a revision.
Access barrier	Change the reading, sensory or response format; keep the subject decision.
Missing source or observation	Keep the gap visible. Name the source or authorised check needed.

Safety and evidence boundary

Use the centre's authorised practical or fieldwork method and local risk assessment. Supplied sample data, fictional place models, card feedback and rehearsals are teaching material. They are not the learner's practical observations or proof of a qualification outcome. For portfolio use, check the exact registered unit/version, accepted evidence and centre process.

Sources and companion notes

Primary classroom source: [SCI_B_W15A_Fossil_Formation_Story_Explore.html](#)

The uploaded lesson is included unchanged. Text and teaching steps in the PowerPoint are editable; source diagrams are placed images. Word booklets are editable. Static PDFs cannot reproduce HTML controls; use the paper cards/tables or open the original HTML.

Verification scope: matched to the uploaded title, pathway, objective, stage sequence and 40-minute timing. Embedded workbook references are retained as source locators; this is not a new line-by-line audit of every scheme-of-work row or a centre assessment sign-off.
