

Solar System Presentation: Mission Briefing

GROW • Science • 40 minutes

I can present researched Solar System findings clearly, credit sources and respond to an audience question with a change or a clear reason plus one transfer step.

Prepare before pupils arrive

Setup: Prepare a low-stimulation paper route and a simple school-device route. Name genuine audience partners and provide question prompts linked to meaning, evidence or sources.

Safety: Check all media for flashing or distressing content, preserve privacy, use school accounts only and offer non-speaking and low-audience alternatives without lowering the Science goal.

Equipment: Research record, paper panel or school device, source labels, audience question slip and revision record.

Safety: Use only school-approved content and devices, share no personal information, avoid flashing effects and follow agreed volume and movement routines.

Fallback: Use a paper poster, object arrangement, signed or spoken briefing, recorded audio without personal details, or an adult-scribed script.

Access and participation

Offer reading aloud, pointing, signing, quiet thinking, a no-touch route and exact scribing where these support the learner. Keep the same subject decision. In shared work, let each learner commit before feedback; use a partner as card mover or checker, then swap. Avoid public speed rankings.

Source lesson curriculum link: Research and present findings about the Solar System using ICT.

40-minute teaching sequence

Stage / total time	Teaching move	Adult support / response
Arrival · 3 min	Last lesson: how can another person find the source card for your note? Last lesson: explain paraphrase without using the word copy.	Wait, regulate and retrieve through the lightest workable route. If recall is inaccessible, point to one retrieval sentence; do not teach today's answer.
Starter · 3 min	Think first. Point, say, sign or write your choice.	Protect curiosity: receive every first idea without judgement. Ask 'What makes you think that?' and preserve the prediction for later evidence.
I do · 4 min	claim — answer statement evidence — facts that support audience — real receiver State the focused question, then give one answer claim in a complete sentence. Select two or three facts that directly support the claim.	Let the teacher/model carry the explanation; pupils watch, point or track. Use a visual cue only if access is the barrier, then fade it.

Stage / total time	Teaching move	Adult support / response
We do · 4 min	Commit to an answer. Show the evidence you used.	Scan every response mode. Do not infer understanding from handwriting or confidence. Secure: transfer. Mixed: contrast. Misconception: counterexample then a fresh question.
I do 2 · 3 min	Invite one question about meaning, evidence or a limit; silence is not an audience response. Repeat the question in your own words, then point to the part of the briefing it checks.	Model one complete evidence-to-explanation sentence, then pause. Keep the science words; change density, modality or adult role before changing the goal.
We do 2 · 4 min	Route each presentation component to its scientific job before the live briefing. Choose one presentation component.	Protect pupil operation and thinking; support handling only where needed. Ask what changed and what stayed the same before supplying a scientific word.
Independent · 15 min	Deliver a short Solar System briefing to a real audience, receive one question and record either a useful change or a clear no-content-change reason plus one transfer step. Record: A saved slide, paper panel or witness record; source labels; one audience question; and either a before-and-after change or a clear confirmation plus one transfer step.	Protect independence. Accept equivalent evidence routes and scribe exact meaning. Prompt only as much as needed; fade as soon as the pupil continues.
Exit · 4 min	What did you say, who received it, and what changed? If no content changed, why was that right and what transfers next?	Genuinely receive one final response and name back the Science heard or seen. Choose one visible next move. The pupil writes what they said and what changed.

The timing belongs to the whole stage. Several PowerPoint slides may share it; do not restart that time on every slide. Full source-stage text is in the PowerPoint speaker notes and original HTML.

Answers, evidence and feedback

Hinge answer: A focused claim, two facts that answer the question, a labelled diagram and source codes.

Correct. The panel connects claim, relevant evidence and sources in a form the audience can follow.

Misconception repair

Repaired. A useful visual can make meaning clearer, but chosen evidence, accurate words and source codes support the claim.

Guided checkpoint

Correct. The panel connects claim, relevant evidence and sources in a form the audience can follow. Choose the option where each feature helps the audience judge the scientific claim.

Opening line

Focused claim. Claim: the audience hears the focus and proposed scientific answer. This sentence states what the briefing will explain.

Supporting fact

Evidence and source. Evidence: the fact supports the claim and another person can find its source card. Ask which component lets the audience judge support for the claim.

Labelled diagram

Evidence and source. Evidence: the diagram makes a useful fact clearer and shows its source code. The diagram's job is to support and clarify, not merely decorate.

Received question

Audience response and next step. Audience response: receiving the question accurately creates a genuine feedback loop. This occurs after another person has responded to the briefing.

Visible revision

Audience response and next step. Audience influence: the question produced a visible scientific improvement. This card records what changed because the audience responded.

Confirmed, then transfer

Audience response and next step. Audience influence: a clear reason for no content change leads to one transfer step. This card comes after real feedback and records why the content stays plus what changes next.

One-sentence answer

Focused claim. Claim: the main scientific answer is clear before supporting detail. This is the statement that the evidence must support.

Model limitation

A short briefing cannot contain every fact. Attractive slides do not prove accuracy, and an audience question does not replace source checking.

Independent evidence

A saved slide, paper panel or witness record; source labels; one audience question; and either a before-and-after change or a clear confirmation plus one transfer step.

Supported: Present one claim and two facts with a three-panel frame; receive one choice-based question and change one panel, or mark it confirmed and choose one next audience. Use symbols, pointing, switches, signing, speech or an adult scribing exact words. Rehearse with the sentence frame.

Standard: Give a one-to-two-minute briefing with claim, evidence and sources, then respond with a visible change or a clear reason plus one transfer step. Use cue cards: question, claim, evidence 1, evidence 2, source, audience response, next step.

Stretch: Present a justified finding, acknowledge one uncertainty or limit and respond to a probing question with a revision or a defended no-change decision plus transfer. Explain why the response makes the Science clearer, more accurate or ready to transfer.

Record the teaching response

What the learner actually showed	Next teaching action
Secure explanation with evidence	Reduce content prompting; offer another example or a limitation.
Partly correct / mixed	Point to the deciding evidence and invite a revision.
Access barrier	Change the reading, sensory or response format; keep the subject decision.
Missing source or observation	Keep the gap visible. Name the source or authorised check needed.

Safety and evidence boundary

Use the centre's authorised practical or fieldwork method and local risk assessment. Supplied sample data, fictional place models, card feedback and rehearsals are teaching material. They are not the learner's practical observations or proof of a qualification outcome. For portfolio use, check the exact registered unit/version, accepted evidence and centre process.

Sources and companion notes

Primary classroom source: [SCI_G_W10B_Solar_System_Presentation_Do.html](#)

The uploaded lesson is included unchanged. Text and teaching steps in the PowerPoint are editable; source diagrams are placed images. Word booklets are editable. Static PDFs cannot reproduce HTML controls; use the paper cards/tables or open the original HTML.

Verification scope: matched to the uploaded title, pathway, objective, stage sequence and 40-minute timing. Embedded workbook references are retained as source locators; this is not a new line-by-line audit of every scheme-of-work row or a centre assessment sign-off.
