

# Food-jobs evidence mission

## Choose. Explain. Revise.

I can use food information to improve a fictional model.

# Retrieve the food-job cards

Find Monday's food-job choices.

Use the information table as evidence.

We use made-up menus, not personal meals.

# Case 1: only bread and water

Keep the bread and water cards.

What jobs do they help with?

Which body needs are not well represented?

# Add variety and give evidence

Add a source of protein.

Add fruit or vegetables.

Explain what each addition can provide.

## Case 2: change the protein source

Start model: meat, rice and vegetables.

Now make the model meat-free.

Which card can replace meat's protein role?

# Compare two workable choices

Try a beans version and a lentils version.

Which body job does each help with?

How are the choices alike and different?

# Pause: check the reason

Does the reason name a body job?

Check it against the food information.

“I like it” does not show its nutrient job.

# Improve one choice or explanation

Keep the first version of a case.

Change one choice or make the reason clearer.

Show what the food provides.

Save both versions and tidy the cards.

# Your voice can change the lesson

What helped you join in?

What could make the next activity easier?

Point, sign, speak, write or pass privately.

Adult: agree one change and explain any limit.

# Explain a food job

Supported: name one body job of food.

Standard: explain why variety matters.

Stretch: can one food help several jobs?
