

PUPIL WORKSHEET

Animals get food by eating

Autumn 1 · Week 7 · Lesson A

Name: _____ Date: _____

Distinguish producers and consumers in simple green-plant food chains, read arrows from food to eater and justify a correction.

Use this sheet with the lesson. You may point, sign, speak, draw, write, dictate or direct an adult. Keep your first idea so you can show what changed.

1. Food-source clues

Read or hear the clues. Name producer or consumer for each example.

Living thing in the model	Evidence	Role
Grass plant	Green parts make food using light.	
Rabbit	Can eat grass.	
Fox	Can eat rabbits.	
Caterpillar	Can eat leaves.	
Robin	Can eat caterpillars.	

2. Build the first chain

Write, draw, point or dictate as agreed with your teacher.

Use grass, rabbit, fox and two arrows. A rabbit can eat grass; a fox can eat a rabbit.

- My chain: ____ → ____ → ____.
- The first arrow means ____.
- The second arrow means ____.
- The producer is ____ because ____.

3. Correct a deliberate error

Write, draw, point or dictate as agreed with your teacher.

Someone draws rabbit → grass using the same feeding clue. Explain or direct a repair.

- The clue tells me ____.
- The repaired arrow is ____ → ____.
- It points this way because ____.

4. Explain the model's meaning

Write, draw, point or dictate as agreed with your teacher.

Use a role and an evidence word. No one needs to collect or feed real organisms.

- A fox is a ____ because ____.
- If grass decreases, a rabbit might ____ because ____.
- One thing this simple model cannot tell us: ____.

Choose a response route

Agree one route with your teacher; you do not need every route.

Supported

Point to producer/consumer and direct one arrow using a read-aloud clue.

Standard

Build a three-organism chain and explain both arrows.

Stretch

Diagnose reversed arrows and qualify a prediction about fewer plants.

Keep this record for Wednesday Week 7.
