

PUPIL WORKSHEET

Food-chain change investigation

Autumn 1 · Week 7 · Lesson B

Name: _____ Date: _____

Build two food-chain models, repair arrow errors and make qualified predictions about a reduced plant food source.

Use this sheet with the lesson. You may point, sign, speak, draw, write, dictate or direct an adult. Keep your first idea so you can show what changed.

1. Build two chains

Use each feeding clue to build and label a model.

Model	Feeding evidence	My chain
A	Rabbit can eat grass; fox can eat rabbit.	
B	Caterpillar can eat leaves; robin can eat caterpillar.	

2. Diagnose and repair an arrow

Write, draw, point or dictate as agreed with your teacher.

Turn one arrow the wrong way. Describe what that direction would mean, then use the supplied clue to repair it.

- Wrong arrow: ____ → ____.
- It would pass food from ____ to ____.
- The clue says ____.
- Corrected arrow: ____ → ____ because ____.

3. Predict a model change

Write, draw, point or dictate as agreed with your teacher.

Cover the plant card in each model. Use might/could and explain the food link.

Model	Possible direct effect	Possible later effect / limit
Grass / rabbit / fox		
Leaves / caterpillar / robin		

4. Improve your explanation

Write, draw, point or dictate as agreed with your teacher.

Keep first reasoning, then revise one detail using a clue. Choose an exit question.

- My first explanation: ____.
- My improved explanation: ____.
- One limit of this model: ____.
- Exit: how could fewer plants affect an animal that does not directly eat them?

Choose a response route

Agree one route with your teacher; you do not need every route.

Supported

Build/direct both chains with an adult reader, repair one arrow and choose a prediction.

Standard

Label both chains, justify arrow repair and explain one possible indirect effect.

Stretch

Compare both changes and explain why the model cannot predict exact animal numbers.

Keep the evidence for the following week. The separate Week 8 enrichment is outside this pack.
