Short horticulture knowledge card

Pink supported edition

Horticulture: soil, seeds & planting.

Soil

Soil has mineral pieces, organic matter, water, air and living things.

Check the sample

Look for lumps and small pieces.
A damp sample may feel gritty, smooth or sticky.
You may use gloves, a blunt tool or sight only.

Choose the medium

Use the adult-approved fresh growing medium for our pea tray.
Hand and sight checks give texture clues. They do not prove a sample is safe or rich in nutrients.
