Winter plant care knowledge

Pink supported edition

Seasonal growing & plant care.

Winter indoor care

Seedlings need bright light and suitable warmth.
Keep trays away from heaters and cold draughts.

Check the medium.
Keep it lightly damp, without pooled water.
Check before watering again.

The adult removes a germination cover when shoots emerge.
Long pale shoots can be a clue to check light.

No tasting or eating.
You may choose an observer or recorder job.

More room only if ready

Thin means remove selected extra seedlings.
Prick out means move a small seedling.

The adult checks the crop and leaves first.
A few true leaves and robust growth can show readiness.
One week does not mean ready.

Support roots. Hold a leaf gently.
Do not pull the stem.

Peas usually move with an intact root ball.
Do not pull tangled roots apart.
Waiting is a valid decision.
