Tool safety and hygiene card

White standard edition

Maintaining a growing area.

Check before working

The adult checks the area, weather, tools and task. Wear suitable footwear, cover cuts and use suitable gloves. Keep routes clear. Stop if ground is frozen or slippery, tools are damaged or something is unknown.

Care without damage

Check moisture before watering. Remove only an unwanted plant the adult has identified. Keep tools away from crop roots. Look for pests and damage without handling unknown plants, fungi or animals. Tell the adult what you notice.

Tools and cleaning

Walk with tools low and points away. Park tools before changing jobs or taking a pause. Use brushes and clean water for checked pots and blunt tools. The adult handles sharp objects, blades, chemicals, animal waste and suspected contamination.

Finish safely

Clear spills, store tools and wash hands with soap and water even after gloves. Do not taste, sniff or blow soil or plants. A non-contact observer, label or recorder job is available. Tell the adult before a quiet pause.
