Growth comparison knowledge

Pink supported edition

Record growth (links Science).

Measure real plants

Use the same marked shoot and method.
Measure without pulling or stretching.
Count whole opened leaves at the stem.
The adult shows one whole pea leaf.

Do not count leaflets or tendrils.
Write what the plant looks like too.

Check the records

The adult checks the Week 2 history.
If it is missing, describe today only.
Do not invent past conditions.

Invented model only

These numbers are invented.
They are not your data or a growth target.

Invented measure	A brighter position	B dimmer position
Week 2 height	3 cm	3 cm
Week 2 whole leaves	1	1
Week 5 height	10 cm	14 cm
Week 5 whole leaves	4	3
Week 5 condition	Green and firm	Pale and leaning

Growth comparison knowledge continued

Pink supported edition

Reading the invented model

A gains 7 cm. B gains 11 cm.
B is 4 cm taller at Week 5.
B has fewer whole leaves and looks pale and leaning.

Taller alone does not mean healthier.
Light may contribute. One tray per condition does not prove a cause.

Your real conclusion

Use your own figures and a limit.
Keep the model numbers separate.
Missing history or data stays unavailable.
