Plant readiness and care handover

White standard edition

Horticulture outcome.

Choose what is ready

Check the actual crop, roots and need for space. Pot on only when needed and ready, keeping the pea root ball intact. Do not pull tangled roots apart. If a plant is not ready, leave it, give only needed care and record the decision.

Planting out has extra checks

The original close-sown pea observation trays stay on the indoor potting or care route. Outdoor planting is only for another crop already confirmed suitable, with completed hardening off, appropriate ground and weather, root readiness and adult permission. Frozen or waterlogged ground is unsuitable. No edible harvest is promised.

Handover before leaving

Keep the crop and original tray code on the label and record any new pot or position. An adult must accept daily checks, backup and safe access during nonteaching days. Check before watering. Agree what happens if the usual adult or access is unavailable. No pupil is required to take plants home.
