Book strip

Science · BUILD · Autumn 2 · Week 1 · SCI_BUILD_A2_W01_P1

Use less, use again, sort waste: introduce and explore. · Weekly arc: Introduce and explore.

Goal: I can describe how to care for a place by using less, using safe items again, and sorting waste for recycling.

Today I can: I can say how to use less of a material. · I can pick a clean, safe item to use again. · I can sort waste after checking the bin rules and say why.

Route card

Staff: cut these cards apart before the lesson. Give one route card. Mark actual **I · S · C** beside each task.

Supported

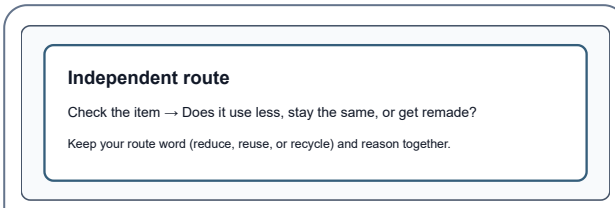

Supported route card: match classroom items to reduce, reuse, or recycle with a clear reason.

Look at Reference A. Match the paper with a blank back to Reduce (use less) or Recycle.

Use Reference A and Reference B. Work in your book or usual mode.

Staff I ☐ S ☐ C ☐

Independent

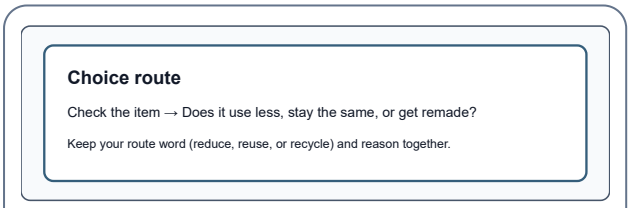

Independent route card: match classroom items to reduce, reuse, or recycle with a clear reason.

Use Reference A. Sort the four items (sheet with blank back, clean tub, cloth bag, empty metal can) into Reduce, Reuse, or Recycle.

Use Reference A and Reference B. Work in your book or usual mode.

Staff I ☐ S ☐ C ☐

Choice

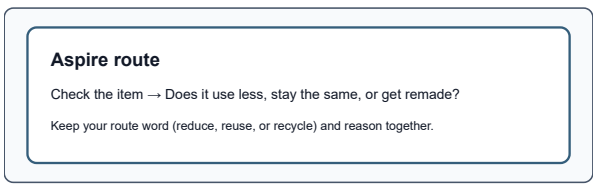

Choice route card: match classroom items to reduce, reuse, or recycle with a clear reason.

1. I write on the blank back of a sheet. Choose: Reduce (use less) / Buy more. 2. I fill a clean tub with pencils. Choose: Reuse (use again) / Throw away.

Use Reference A and Reference B. Work in your book or usual mode.

Staff I ☐ S ☐ C ☐

Aspire challenge

Aspire challenge card: explain why reduce and reuse come before recycle and how dirty items spoil a recycling batch.

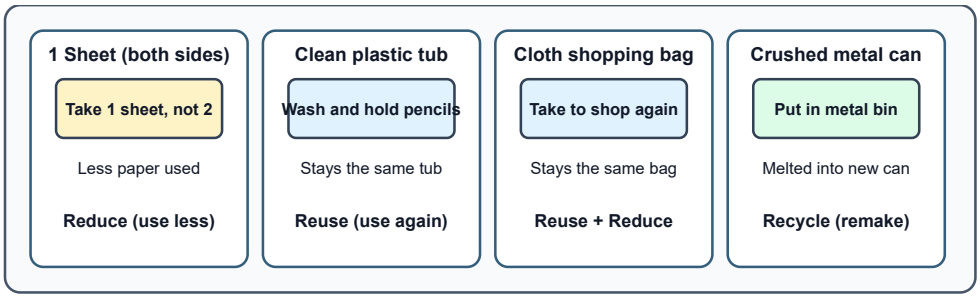

Explain the difference between reusing a clean plastic tub and recycling it.

Available from any route.

Staff I ☐ S ☐ C ☐

Reference sheets

Reference A · Classroom waste examples

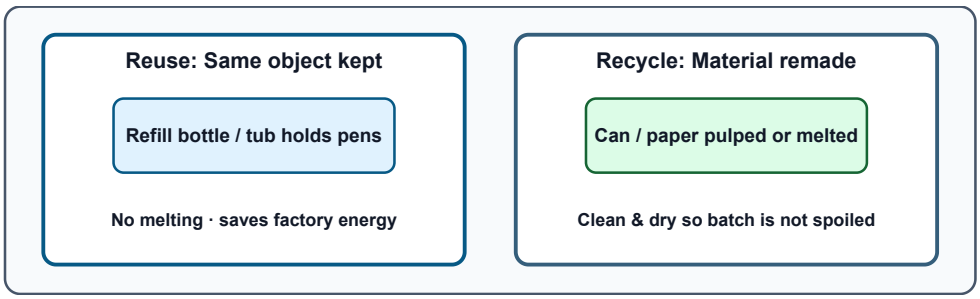

Four classroom waste items compared across action, object clue, and waste route.

Reference only. Do not write on this sheet. Use both clue columns to choose reduce, reuse, or recycle.

Classroom item	What we do with it	What happens to the object	Waste route	Why it helps
One sheet of paper (both sides)	Write on side 1 and side 2	We take 1 sheet instead of 2 at the start	Reduce	Saves new paper before waste is made
Clean plastic tub	Wash it and store pencils on the desk	Stays the same plastic tub	Reuse	No new pot needed and no factory melting
Cloth shopping bag	Carry shopping in it many times	Stays the same cloth bag	Reuse (and Reduce)	Replaces single-use plastic bags
Crushed metal drink can	Put clean and dry into the metal bin	Melted at a factory into new metal	Recycle	Saves digging up new metal ore

Reference B · How to tell reuse and recycle apart

Reuse keeps the same object without melting; recycle remakes clean, dry material at a factory.

Check question	Reuse	Recycle
Does the item stay the same object?	Yes — the tub stays a tub; the bottle stays a bottle	No — the can or paper is broken down and remade
Does it need factory melting or pulping?	No — wash or refill and use again straight away	Yes — uses factory heat, water, and energy
What preparation is needed?	Keep clean and safe to use again	Empty, rinse, and dry so food does not spoil the batch

Made by Matt

Catch-up sheet

Absence or access only. This sheet gives a fast entry if a pupil joined late or missed the start. Never add it on top of today's routine tasks.

1. **Reduce (use less):** Use both sides of one sheet of paper so you take less paper at the start.
2. **Reuse (use again):** Wash a plastic tub and keep pencils in it. It stays the same tub.
3. **Recycle (remake):** Put a clean metal can in the recycling bin so a factory can melt it into a new can.
4. **Quick link:** Point to the clean plastic tub on Reference A. Say whether it stays the same tub or gets melted down. Then join today's You do task 1.

Point, speak, sign, draw, type, write, or tell an adult. You may pass.

Made by Matt

Choice route sheet

Circle or point to your choice, then give a short reason from Reference A.

1. 1. I write on the blank back of a sheet. Choose: Reduce (use less) / Buy more. 2. I fill a clean tub with pencils. Choose: Reuse (use again) / Throw away. Staff I ☐ S ☐ C ☐

Help: Point to or circle the first choice in each pair using Reference A.

2. 3. What is a drink can made of? Choose: metal / paper. 4. Before putting a can in a recycling bin, what do we check? Choose: local bin label / nothing. Staff I ☐ S ☐ C ☐

Help: Look at the empty metal can row on Reference A.

3. 5. Which choice uses less new material for carrying books? Choose: use a clean cloth bag again / take a new bag every time. Give one short reason. Staff I ☐ S ☐ C ☐

Help: Say or write: Use the cloth bag again because it needs no new material.

Teacher answers and topic guidance

Accept any scientifically equivalent wording in spoken, signed, pointed, drawn, or written form.

Starter answer

Option A (Reuse). Washing a plastic tub and keeping pencils in it uses the same tub again without melting or remaking the plastic.

Arrival · Supported

1. Tray B shows a clean tub holding pencils.
2. Animals get food from what they eat.
3. Muscles pull on bones to help us move.
4. Yes. We can write on the blank back to use less paper.

Arrival · Independent

1. Tray A shows a paper sheet with a blank back.
2. Animals get food from what they eat, while green plants make their own food using light.
3. The skeleton holds the body up and muscles pull on bones so we can move.
4. Using the clean tub again holds pencils without needing to buy or make a new tub.

Arrival · Aspire

1. Tray A uses the blank back so we take no new paper, and Tray B reuses a clean tub so we need no new pot.
2. Animals cannot make their own food, so they must eat to get energy and materials for their bodies.
3. A muscle can contract and pull a bone across a joint, so another muscle pulls it back.
4. We must check that the tub is clean and has no sharp or broken edges.

You do · Supported mark scheme

1. The paper with a blank back matches Reduce (use less). *(Up to 2 marks)*
2. We can reuse the clean tub to hold pencils, or reuse the cloth bag to carry books. *(Up to 2 marks)*
3. I can use the tub again because it is clean and safe. *(Up to 2 marks)*

You do · Independent mark scheme

1. Reduce: sheet with blank back. Reuse: clean tub and cloth bag. Recycle: empty metal can (after checking local bin rules). *(Up to 3 marks)*
2. Using the cloth bag again is reuse. It saves new material because we do not need to make a fresh bag. *(Up to 3 marks)*
3. First check that the item is clean and has no sharp edges. Second check the local bin label to see if that material is accepted. *(Up to 2 marks)*

You do · Choice mark scheme

1. 1. Reduce (use less). 2. Reuse (use again). *(Up to 2 marks)*
2. 3. Metal. 4. Local bin label. *(Up to 2 marks)*
3. Use a clean cloth bag again because it is clean and needs no new material. *(Up to 2 marks)*

You do · Aspire challenge mark scheme

1. Reusing keeps the same clean tub and uses it again without changing it. Recycling breaks the old plastic down at a factory to make a new item. *(Up to 2 marks)*
2. Using less and reusing a safe item stop waste right away without needing lorries and factory energy to melt and remake the material. *(Up to 2 marks)*

Exit ticket · Supported

1. That is Reduce (use less).
2. Yes. That is reuse.
3. We check the local bin label.

Exit ticket · Independent

1. Reduce: write on the blank back of a sheet. Reuse: fill a clean tub with pencils or use a clean cloth bag again.
2. Material means what a thing is made of, such as metal in a can or paper in a sheet.
3. Different places accept different materials, and the wrong item can spoil the recycling load.

Exit ticket · Aspire

1. Reuse uses the same clean item again as it is, while recycle processes old material into a new product.
2. Refilling reduces the number of new bottles made and avoids the energy needed to collect and reprocess five bottles.
3. An unchecked waste item could be dirty or have sharp edges that could hurt someone.

Topic guidance and common misconceptions

- **Reuse vs recycle:** Pupils often call any positive environmental action 'recycling'. Emphasise the object test: if the bottle or tub stays the same object, it is **reuse**; if a factory melts or pulps the material to make a new thing, it is **recycle**.
- **Why reduce and reuse come first:** Recycling still uses collection trucks, heat, water, and electricity. Reducing and reusing save both raw materials and factory processing energy.
- **Clean and dry sorting:** Food or liquid left inside containers can spoil a whole load of paper or card in a recycling bin.
